About the Endicia Label Server

The Endicia Label Server application integrates into a number of applications, from online shopping carts, Web sites, and fulfillment or distribution centers to multiple location, multiple user, and multiple carrier applications, allowing integrators to provide postage solutions to users. The Endicia Label Server uses APIs that allow integrators to seamlessly add United States Postal Service (USPS) shipping into their applications without changes to existing workflows. The Endicia Label Server is an XML Web Service that supports domestic mail classes, PO Boxes, APO/FPO addresses, discounted domestic and international mail with automatically filled customs forms.

The Endicia Label Server provides users with Dial-A-ZIP, Endicia's patented address verification technology. Endicia's Dial-A-ZIP API validates address errors (single or batch mode) using the USPS address database. When a submitted address does not match, the system provides an error code that indicates common address syntax errors. The same process also indicates whether the address is business, residential, or rural. Given costly residential or rural surcharges, this information is crucial in determining the most cost-effective shipping carrier.

Endicia Label Server Application Programming Interface

The Endicia Label Server Application Programming Interface (API) allows integrators to embed 100% Web-based, on-demand services of the USPS into their applications and Web sites to let their customers print postal shipping labels directly from their applications. The Endicia Label Server produces an integrated label image, complete with Stealth (hidden) postage, return addresses, verified delivery addresses, and service barcodes (Delivery Confirmation, Signature Confirmation, Certified Mail with optional Electronic Return Receipt, Express Mail, Confirm Services, or customs forms).

Web Service System Requirements

The Endicia Label Server Web Service requires that you have:

- A deployment computer with an Internet connection.
- The ability to send requests using HTTP 1.1 or SOAP 1.1 protocols.
- The ability to parse XML.

The Endicia Label Server Web Service is a standard XML-based Web Service exposed through Web Services Description Language (WSDL). It can be programmatically accessed by any development environment that supports calling an XML Web Service using SOAP or HTTP POST. It has been highly tested and documented for environments using Microsoft Visual Studio .NET tools for Web Service development.

A Quick Start with the Endicia Label Server Web Service

The basic principle is that you send a label request to the Endicia Label Server Web Service in either HTTP POST or SOAP format. The Endicia Label Server Web Service then authenticates your <u>Account ID</u> and <u>Pass Phrase</u> and processes the label request. When it has processed the request, it sends the label image it generated, according to the parameters that you specified in your request.

To instantiate the Endicia Label Server Web Service, follow the procedures for invoking or making a reference to an XML Web Service in your preferred development environment. After the Endicia Label Server Web Service has been instantiated, you are ready to call its various methods.

The Endicia Label Server Web Service for development purposes (referred to as the Test Server) is at:

https://www.envmgr.com/LabelService/EwsLabelService.asmx

The WSDL (Web Service Description Language) is at:

https://www.envmgr.com/LabelService/EwsLabelService.asmx?WSDL

Upon approval, you will be sent a "Welcome" e-mail message with information for signing up an account and the URL for the Production Server.

Important! Legacy account numbers (DAZzle—PC or Mac) will not work with the Endicia Label Server. As required by the USPS, new account numbers must be created that are specific to the Endicia Label Server.

Endicia Label Server Web Service Concepts

The basic concept around the Endicia Label Server is to provide partners, developers, and integrators with the ability to print US Postal Service pre-paid shipping labels with postage.

The interface is a set of Web Services that are designed to be integrated into other applications or Web sites. The Web methods of the Endicia Label Server Web Service allow applications to use the US Postal Service in a manner similar to the shipping APIs that other carriers provide.

Important! There are several differences between using the US Postal Service and other competing carriers (such as FedEx or UPS). Mainly, the differences pertain to the fact that the US Postal Service Shipping Labels include postage, which is treated like money and thus requires certain procedures to safeguard that transaction and allow customers to recover from any mistakes. This differs from other carriers, where a customer may not be billed until a printed label is scanned.

Security Model

The security model of the Endicia Label Server:

- Safeguards the postage.
- Allows Endicia to provide the Endicia Label Server functionality to partners without having the partners go through a security certification.
- Supports labels that have some form of tracking. This means that only mail classes that the USPS scans at some point are supported. This includes all mail classes that include:
 - Delivery Confirmation or Signature Confirmation: First-Class Parcels, Parcel Post, Library Mail, Media Mail, and Priority Mail.
 - o Tracking: Express Mail.
 - o Customs Form Numbers: International Priority Mail and International Express Mail.
 - PLANET Code: for First-Class Mail.
 Note: The use of PLANET Code requires approval by both USPS and Endicia. For more information, contact the Endicia Label Server team.

About Printing Labels

To print shipping labels, you must set up an account with the US Postal Service through Endicia. Endicia has a secure link with the US Postal Service, and all account information is transferred to them. Additionally, all postage information is also transferred to them electronically. Any postage that is purchased through the Endicia Label Server is transacted through Endicia, but the money never resides at Endicia. Instead, Endicia issues the transactions to take the money from the user's account to the US Postal Service.

About Setting Up Accounts

One of the first things that you must decide is how to set up accounts. Depending on how you are using the Endicia Label Server, each approach will differ.

One fundamental design constraint that impacts how many accounts that you may set up is how the postage is paid for. Currently, Endicia requires that an account can only have one financial way to fund postage. However, a partner can have several accounts, each funded by a different source. Examples of different sources include, bank account, ACH pull or direct debit, ACH push or credit, check, wire transfer, and credit card). For more information about postage payment methods, go to: http://www.endicia.com/SignUp/Notice/PostagePaymentOptions/

There is no limit to the number of accounts that a partner may open for themselves or on behalf of their customers (in the case of some of the Endicia Enterprise Solution customers).

Several different categories of partners use the Endicia Label Server, and depending on their business models, each partner creates accounts in different ways. A few examples follow:

- A partner could be an individual user or company wanting to implement a full Web Service solution into their application. In this case, the partner can set up one Endicia account and allow all transactions to be processed through their application.
- A partner could be an eCommerce Web site that has buyers and sellers. The partner wants to allow the sellers to print shipping labels with postage. In this case, the partner can set up one Endicia account and allow all transactions to flow through that account.

 Exception: If the site is a very high volume site (more than 5 labels per second), you should consider
 - Exception: If the site is a very high volume site (more than 5 labels per second), you should consider having more than one account to divide the load.
- A partner might have a software product that is sold to other companies. Suppose that this is a large Web-based CRM Enterprise application. In this case, the partner would not want to have the postage liability and instead would assign at least one Endicia account for each one of their customers.
- A partner could be a CRM Enterprise customer (such as a Fortune 500 company) that has several funding mechanisms, and then they should have at least one Endicia account per funding mechanism.
- A partner could be a third-party software provider for multi-carrier shipping systems seeking to integrate PC Postage into their application. In this case, the partner could use either single or multiple accounts depending on their business model. To explore these various options, contact the Endicia Label Server team.

Endicia has created automated interfaces to allow creation of accounts through the API. Currently, partners are provided with a URL to create accounts. For more information, see <u>Account Sign-ups</u>.

About Obtaining Pass Phrases

You must complete the following steps to correctly obtain a production-ready Pass Phrase:

- 1. During the account setup and sign-up stages, you must select a temporary Pass Phrase on the Web site
- 2. After you receive the e-mail message that contains the assigned account number, you must then use the ChangePassPhrase (or ChangePassPhraseXML) Web method of the Endicia Label Server Web Service and create a new Pass Phrase. *This is one of the important elements of the security model as required by the USPS*. If you are catering to Endicia Enterprise Solution customers who each have their own Endicia Account, you must include this functionality into your application so that your customers can set up accounts and then reset their Pass Phrase. This also allows them to independently reset and change their Pass Phrases.

Web Passwords

Endicia also carries the additional concept of the Web Password. You use the Web Password to:

- Gain access to the endicia.com Web site.
- View account transactions.
- Change account information.

The Web Password does *not* enable you to buy and print postage.

Typical Partner Path to Develop and Deploy the Endicia Label Server

1. In Development Mode:

a. Build your Endicia Label Server Web Service interface against the Test Server to perform Pass Phrase resets, buy postage, and request shipping labels. In this mode, you can test with any 6-digit account number. (**Note:** Everything that you need to begin developing and testing is outlined in this document.)

2. To Qualify for Production:

- a. Complete an Endicia Label Server Agreement (a Label Server Agreement was part of the original email message that was sent to you with this Endicia Label Server documentation).
- b. Complete the required USPS Partner Profile (Exhibit B—Partner Description in the Label Server Agreement).
- c. Obtain approval for your label by sending an email message to the Endicia Label Server Team (LabelServer@endicia.com) a sample label that the Test Server has produced.

3. To Move to Production:

- a. Decide how many accounts you need.
- b. Set up one or more accounts (through either the Account Signup API or Endicia.com using a custom link that the Endicia Label Server team has assigned to you).
 - i. You must provide a temporary Pass Phrase.
 - ii. You will receive an email message with your account number information.
- c. Perform a Pass Phrase Reset using the ChangePassPhrase (or ChangePassPhraseXML) Web method of the Endicia Label Server Web Service. This results in a production Pass Phrase.
- d. Buy postage using the BuyPostage (or BuyPostageXML) Web method of the Endicia Label Server Web Service.
- e. Request a shipping label using the GetPostageLabel (or GetPostageLabelXML) Web method of the Endicia Label Server Web Service.
 - **Note:** You can also request shipping labels with test postage against the production server.

Endicia Label Server Production Startup Steps

After you have been approved to proceed to production, you can do the following:

1. **Open an account:** First, you must open an Endicia postage account. You must link to the following URL:

http://www.endicia.com/Labelserver/Login.cfm?partid=xxx

where xxx is the Partner Code assigned to you after completing the steps outlined above.

The Endicia Label Server Production URL is:

https://LabelServer.endicia.com

The preceding URL replaces the development "test" URL that you had been using.

2. **Initialize your account:** As soon as your account is set up, you will receive an e-mail confirmation with the account number. You must then reset your Pass Phrase using the Endicia

Label Server Web Service and set a new Pass Phrase on the account. Successful completion of that step activates the account and allows you to then start buying postage and issuing print postage transactions.

- 3. **Buy postage:** Verify that you buy postage.
- 4. **Print postage:** Use the account number and pass phrase to print postage.
- 5. **Request refunds:** You can request electronic refunds from your account on the Endicia Web site.
- 6. **Access your account:** Note that you can use your account number and password to access your account at www.endicia.com, and then view your transactions (purchase and print), and also issue refunds.

Refund Policy

Because you are printing shipping labels that have live postage, you must have a mechanism to recover costs if a misprint occurs.

The URL at http://www.endicia.com/ELS/refundpolicy.cfm describes the Endicia Refund Policy. It is current with the USPS rules and regulations. You can either embed it in a frame and display it to your customers or include it in your offering.

Because the Endicia Label Server returns an image of a label, the partner should build in safeguards to allow the end user to make sure that they have successfully printed the label.

Note that because all the labels have some form of tracking, the refunds must be done electronically. Refunds can be requested through an API call or by logging into the Endicia account page on www.endicia.com. No mailed-in physical refunds will be accepted. All electronic refunds must be requested within 10 days of printing the postage. Our system monitors the USPS package tracking system (PTS) and if the label does not appear within 14 (that number could change) days, then the amount of postage is refunded to the account.

The main methods that are available to request refunds are:

- Manual: You may log in to the Endicia account on the Web (<u>www.endicia.com</u>) with your account number and pass word and select Submit Refund Request and follow the instructions.
- **The URL method:** This is appropriate for creating one refund through a Web browser that the partner would either integrate into their site using a frame or opening a new window to our site. It is, however, a manual process.

https://www.endicia.com/ELS/RefundStart.cfm?accountnumber=xxxxxx&webpassword=xxxxxx (&postageidentifier)=xxxxxxxxxxxx

where:

- o &accountnumber is the users account number
- o &webpassword is the user's Web password and
- (&postageidentifier) is *one* of three ways to identify the shipment:

 - &pieceid=xxxxxx (piecenumber)

- &customsid=xxxxxxxxxx (the customs ID number)
 Note: Use &customsid only for international shipments, where the customs ID number has been stored for tracking.
- The Requesting a Refund API: For details on how to use the Refund Web Service API for submitting a refund request, refer to Requesting a Refund API.

About Signing Up Accounts

The following are ways to sign up an account.

• **Manually**: This is appropriate for creating one account that the partner would use but can be used to create many accounts. It is, however, a manual process. For example:

http://www.endicia.com/Labelserver/Login.cfm?partid=xxx

where xxx is the Partner Code assigned to you, and then follow the screen prompts.

- **Web Service**: The Account Sign-up Web Service allows the partner to embed the account creation parameters completely within their process and user interface and post the results to the Endicia server. The specifications are in the Account Signup API section.
- Semi-automating the Web sign-up by passing parameters at the URL line: This allows the partner to provide default values for some of the information on the Account sign-up pages. For example:

https://www.endicia.com/labelserver/login.cfm?PartID=XXXX

Required Components:

PartID—Your Partner ID

Optional Components:

Company Name—Your Company Name

Contact FName—Your First Name

Contact MName—Your Middle Initial

Contact LName—Your Last Name

Contact_Title—Your Title

Customer Email—Your Email Address

Confirm_Email—Your Email Address Again for Verification

Physical_Address—Your Physical Address

Physical_City—Your Physical City

Physical_State—Your Physical State

Physical Zip Code—Your Physical ZIP Code

Mailing address—Your Mailing Address

Mailing_City—Your Mailing Address City

Mailing_State—Your Mailing Address State

Mailing_Zip_Code—Your Mailing Address ZIP Code

Putting It All Together:

URL + ? + Component + = + Component Value + & + Component 2 + = + Component 2 Value etc.

The URL with All Information:

https://www.endicia.com/labelserver/login.cfm?PartID=lngh&Company_Name=LengthC o.&Contact_FName=Bob&Contact_MName=D&Contact_LName=Peterson&Contact_Ti tle=CEO&Customer_Email=bob@Lengthco.com&Confirm_Email=bob@Lengthco.com&Physical_Address=123 Frank St.&Physical_City=New York&Physical_Zip_Code=12345

Contact the Endicia Label Server Team

To contact the Endicia Label Server team, send your inquiries through e-mail message to <u>LabelServer@endicia.com</u>. Prior to sending your e-mail messages, review the following:

- Typical Partner Path to Develop and Deploy the Endicia Label Server
- Frequently Asked Questions

Current Changes

Endicia Label Server is backward compatible with previous versions when that is technically feasible. All methods in this document are supported in the production version 5.0 that will be available as of June 29, 2010.

Note: Refer to the <u>Change History appendix</u> for a complete list of changes. Forward this document to your developers, so that they are aware of the new features.

Version 5.0 (Build 3826) contains the following changes, enhancements, and updates:

- Added a Continuation Page to international customs forms to allow up to 30 customs items.
- Added support for integrated labels with customs forms for international, APO/FPO, and other domestic destinations. These labels also allow up to 30 customs items.

Version 4.9 (Build 3741) contains the following changes, enhancements, and updates:

• Added new Web Methods to calculate "all" domestic or international postage rates: CalculatePostageRates and CalculatePostageRatesXML

Version 4.8 (Build 3691) contains the following changes, enhancements, and updates:

- Added support for the updated USPS international and customs forms 2976-A.
- Added element in the LabelRequest XML to specify the EEL/PFC value for the customs forms 2976-A. The Exemption or Exclusion Legend (EEL) or a Proof of Filing Citation (PFC) is required for shipments to an international destination or to an overseas U.S. Territory.

Version 4.7 (Build 3650) contains the following changes, enhancements, and updates:

- Added support for USPS rates effective January 4, 2010 which also includes:
 - New Flat Rate Padded Envelope for Priority Mail Commercial Plus customers.
 - Cubic pricing for qualified Priority Mail Commercial Plus customer. The Label Server automatically selects the lowest rate based on the weight and volume of the mailpiece!

- o Added support for Parcel Select Barcoded Nonpresorted rates.
- o International shipments to Kosovo.

Version 4.5 (Build 3603) contains the following changes, enhancements, and updates:

- Added support for Standard Mail.
- The SundayHolidayDelivery value for the ServiceLevel element in the LabeRequest and PostageRateRequest XMLs is obsolete. It has been replaced with the SundayHolidayDelivery element.

Version 4.4 (Build 3544) contains the following changes, enhancements, and updates:

- Endicia will be generating all label numbers for international mail labels.
- The SCAN form now accepts international label numbers.

Version 4.3 (Build 3485) contains the following changes, enhancements, and updates:

- Added support for USPS NSA rates for qualified accounts.
- As of May 2009, USPS has renamed the regular Priority Mail Flat Rate box to Medium Flat Rate box.

Version 4.2 (Build 3404) contains the following changes, enhancements, and updates:

- Added support for USPS domestic and international rates effective May 11, 2009.
- To comply with USPS requirements, added a FIM to the indicia in EnvelopeSize10 and Postcard size labels.
- The EmailOptions element in the LabelRequest XML is obsolete.
- Added details about purchasing postage and bank-to-bank postage payment options (Buying Postage API).

E-refunds are not currently supported for FCMI through Label Server. We plan to provide support for physical refunds in the next update to Endicia Label Server.

A complete change history for Endicia Label Server can be found in the Change History section.

2. THE ENDICIA LABEL SERVER WEB SERVICE

Web Methods

The following table lists all the Web methods of the Endicia Label Server Web Service:

Web Method Name	Description
GetPostageLabel or GetPostageLabelXML	Request a shipping label.
BuyPostage or BuyPostageXML	Add postage to an account.
ChangePassPhrase or ChangePassPhraseXML	Change Pass Phrase for an account.
CalculatePostageRate or CalculatePostageRateXML	Calculate the postage and fees for a package.
CalculatePostageRates or CalculatePostageRatesXML	Calculate "all" domestic or international postage rates.
GetAccountStatus or GetAccountStatusXML	Request the status of an account.
RefundRequest	Request a refund.
UserSignup	Sign up for an account.
StatusRequest	Request status of a package.
GetTransactionsListing	Request a list of transactions
SCANRequest	Using the SCAN Form
CarrierPickupRequest	Schedule a Carrier Pickup
CarrierPickupCancel	Canceling a Carrier Pickup Request
CarrierPickupChange	Changing a Carrier Pickup Request
MultiLocationCarrierPickup	Scheduling a Multiple Location Carrier Pickup Request

The Endicia Label Server Web Service Web methods can be invoked using one of two protocols, HTTP POST or SOAP (over HTTP).

HTTP POST

The following is a general format of an HTTP POST request and response. The **placeholders** shown in bold font need to be replaced with actual values.

```
POST /LabelService/EwsLabelService.asmx/Web method Name HTTP/1.1
Host: www.envmgr.com
Content-Type: application/x-www-form-urlencoded
Content-Length: length

Request content
```

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: length

Response content
```

SOAP (Simple Object Access Protocol)

You must install a code library that can call a SOAP-based Web Service. Development tools, such as Visual Studio .Net, are set up to support Web Services out of the box.

Using the Endicia Label Server Web Service for the First Time

Before requesting your first shipping label using the Production Server, you must perform the following steps:

- Sign up for a production account with the URL that will be supplied to you when you show us a test label and have a signed contract.
- Use the ChangePassPhrase (or ChangePassPhraseXML) Web method to do a Pass Phrase "reset" by changing the temporary Pass Phrase assigned to your account during the sign-up process.
- Use the BuyPostage (or BuyPostageXML) Web method to add postage to your account.

Now you are ready to use the GetPostageLabel (or GetPostageLabelXML) Web method to create shipping labels!

The following sections describe the input to, and response from, the Endicia Label Server Web Service Web methods in greater detail.

3. REQUESTING A SHIPPING LABEL API (REQUIRED)

GetPostageLabel

To request a shipping label, use the GetPostageLabel or the GetPostageLabelXML Web method of the Endicia Label Server Web Service.

The following is a sample HTTP POST request for GetPostageLabelXML, which requires a LabelRequest XML string as input. The placeholders shown need to be replaced with actual values:

```
POST /LabelService/EwsLabelService.asmx/GetPostageLabelXML HTTP/1.1
Host: www.envmgr.com
Content-Type: application/x-www-form-urlencoded
Content-Length: length

labelRequestXML=<LabelRequest> ... </LabelRequest>
```

The response contains a LabelRequestResponse XML string:

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: length

<?xml version="1.0" encoding="utf-8"?>
<LabelRequestResponse> ... </LabelRequestResponse>
```

LabelRequest XML Syntax

The following table describes the XML tags for the LabelRequest.

Important notes about all elements:

- Omitting any value causes the Endicia Label Server Web Service to use the default value for that element.
- *Italic* items are optional.
- The Endicia Label Server Web Service requires a valid destination address to process a shipping label. For details on address validation, see Miscellaneous Notes and Features.

Table 3-1: LabelRequest XML Elements

Element	Туре	Size or Values	Description
LabelRequest	Root	-	The root node for the XML request.
Test	Attribute	YES NO	Use sample postage for testing. Use real postage. (Default)
LabelType	Attribute	Default	Create label based on mail class. (Default)
		CertifiedMail	Create Certified Mail label.
		DestinationConfirm	Create PLANET Code label using Destination Confirm service.
			Note: Use of the DestinationConfirm label type requires special approval from Endicia and the USPS. For more details, contact the Endicia Label Server Team.
		Domestic	Create domestic label. Requires use of the LabelSubtype element.
		International	Create international label.
			When the value of this element is set to Domestic or International, the label will be returned as separate images within the Label node of the LabelRequestResponse XML.
LabelSubtype	Attribute	Integrated	Create an integrated label. The integrated form type must be specified in the IntegratedFormType element.
		None	No label subtype (Default)
			Required when label type is Domestic.
			If a value for this element is supplied, it must be set to Integrated when label type is Domestic or International,

Element	Туре	Size or Values	Description
LabelSize	Attribute		For Default label type:
		<i>4</i> ×6	4" W × 6" H (Default)
		4×5	4" W × 5" H
		4×4.5	4" W × 4.5" H
		DocTab	4" W × 6.75" H, Eltron Doc-Tab label
		6×4	6" W × 4" H (not available for
			Express Mail, EPL2 and ZPLII labels)
			For DestinationConfirm label type:
		7×3	7" W x 3" H (Default)
		6×4	6" W × 4" H
		Dymo30384	DYMO #30384 2-part internet
		EnvelopeSize10	label
		Mailer7x5	#10 Envelope
			7" W × 5" H
			For CertifiedMail label type:
		<i>4</i> ×6	4" W x 6" H (Default)
		7×4	7" W × 4" H
		8×3	8" W × 3" H
		Booklet	9" W × 6 "H envelope
		EnvelopeSize10	#10 Envelope

Element	Туре	Size or Values	Description
ImageFormat	Attribute	EPL2 GIF JPEG PDF PNG ZPLII	EPL2 programming language GIF JPEG PDF PNG (Default) ZPL II programming language Only GIF is available for international labels created using LabelType of Default. EPL2 and ZPLII are supported for: - Default label type for domestic mail classes Domestic or International label type when used with integrated form type 2976 International label type when used with Priority Mail International Flat Rate Envelope and Small Flat Rate Box and First Class Mail International. The label image returned in the response for EPL2 and ZPLII labels contain binary data, which require special handling.
ImageResolution	Attribute	203 300	For details, refer to Printing Using EPL2 and ZPLI. 203 dpi 300 dpi Image resolution defaults to 300 dpi for domestic labels as well as labels created using LabelType of International. Image resolution defaults to
			203 for labels with ImageFormat of EPL2 or ZPLII. If this element value is supplied when ImageFormat is set to EPL2 or ZPLII, it must be set to 203.

Element	Туре	Size or Values	Description
ImageRotation	Attribute	None Rotate90 Rotate180 Rotate270	No rotation (Default). Rotate label image 90 degrees. Rotate label image 180 degrees. Rotate label image 270 degrees. For labels in EPL2 and ZPLII format, selecting Rotate180 prints from top of image buffer; selecting None prints from bottom of image buffer.
			Rotate90 and Rotate270 are not available for labels in EPL2 and ZPLII format.
RequesterID	Text	50	Requester ID (also called Partner ID) uniquely identifies the system making the request. Endicia assigns this ID.
			The Test Server does not authenticate the RequesterID. Any text value of 1 to 50 characters is valid.
AccountID	Numeric	6	Account ID for the Endicia postage account.
			The Test Server does not authenticate the AccountID. Any 6-digit value is valid.
PassPhrase	Text	64	Pass Phrase for the Endicia postage account.
			The Test Server does not authenticate the PassPhrase. Any text value of 1 to 64 characters is valid.
MailClass	Text	Express First LibraryMail MediaMail ParcelPost ParcelSelect Priority StandardMail	Domestic: Express Mail First-Class Mail Library Mail Media Mail Parcel Post Parcel Select Priority Mail Standard Mail
		ExpressMailInternational FirstClassMailInternational PriorityMailInternational	International: Express Mail International First-Class Mail International Priority Mail International

Element	Туре	Size or Values	Description
DateAdvance	Numeric	0-7	The number of days to advance date on the indicium.
			Maximum value: 7 days.
WeightOz	Numeric	4.1	Weight of the package, in ounces.
MailpieceShape	Text	Card Letter Flat Parcel LargeParcel IrregularParcel OversizedParcel FlatRateEnvelope FlatRatePaddedEnvelope SmallFlatRateBox MediumFlatRateBox LargeFlatRateBox	Shape of the mailpiece. If this element is set to either LargeParcel or OversizedParcel, it overrides the value supplied in MailpieceDimensions. See the Mailpiece Shape Chart for more information. The Flat Rate Padded Envelope is only available to qualifying Priority Mail Commercial Plus customers. The Label Server
MailpieceDimensions	Node		will return an error if this shape is used with any other pricing. Dimensions of the mailpiece.
			Required for calculating Commercial Plus Cubic pricing and for Priority Mail mailpieces going to Zones 5-8 which are over 1 cubic foot. All values must be in inches.
Length	Numeric	3.3	Length of the mailpiece.
Width	Numeric	3.3	Width of the mailpiece.
Height		3.3	Height (or thickness) of the mailpiece.
AutomationRate	Text	TRUE FALSE	Use applicable automation rate for selected mail class. Use retail price. (Default)
			Available only for letter shape mailpiece using First-Class.

Element	Туре	Size or	Description
Machinable	Text	TRUE Values	Mailpiece is machinable.
	7.5%		(Default)
		FALSE	Mailpiece is non-machinable.
			If a Parcel Select mailpiece
			marked as machinable is over
			35 lbs. in weight or its MailpieceShape is set to
			OversizedParcel, it will
			automatically be charged the
			non-machinable price.
ServiceLevel	Text	NextDay2ndDayPOToAddressee	Next Day/Second Day Post Office to Addressee Service
			Applies only to Express Mail.
			See Miscellaneous Notes &
O do. d.lalida. Dalima.	Tand		Features for more information.
SundayHolidayDelivery	Text		For Express Mail only:
		TRUE	Request Sunday/Holiday
		544.0F	Delivery Service.
		FALSE	Do not deliver on Sunday or holiday. (Default)
SortType	Text	BMC	Sort level for applicable mail
	7.65.11	FiveDigit	classes.
		MixedBMC	
		Nonpresorted Presorted	Required for Parcel Select and Standard Mail.
		SCF	Staridard Iviali.
		SinglePiece	Defaults to SinglePiece for
		ThreeDigit	mailpieces which do not require a sort type.
IncludePostage	Text	TRUE	Print postage on the label.
		FALSE	(Default) Do not print postage on the
		7,232	label.
ReplyPostage	Text	TRUE	Print reply postage on the label
			which means the Sender's and
			Recipient's address will be swapped when printing.
		FALSE	Do not print reply postage.
			(Default)
			Can only be with label type of
			Default or DestinationConfirm.
			Not available for Express Mail,
			international mail, integrated
			labels or when Return Receipt is requested.

Element	Туре	Size or Values	Description
ShowReturnAddress	Text	TRUE FALSE	Print sender's address on the label. (Default) Do not print sender's address on the label.
			Defaults to TRUE for integrated labels.
			Even though this element can be used to hide the return address in the label, the USPS rules requires that a return address must appear on the mailpiece in specific circumstances. For more information, see the USPS Domestic Mail Manual.
Stealth	Text	TRUE	Turn on the use of "stealth" or hidden postage. (Default)
		FALSE	Turn off stealth.
			Stealth cannot be used with COD, USPS Insurance, Registered Mail, Automation rate, LabelSize of EnvelopeSize10 and Card shape mailpieces.
			For Standard Mail, Stealth is turned on.
ValidateAddress	Text	TRUE	Validate all addresses. (Default)
		FALSE	Bypass address validation (requires partner to do Address Validation).
SignatureWaiver	Text		For Express Mail only:
		TRUE FALSE	Request waiver of signature for receipt of mailpiece. Request signature for receipt of mailpiece. (Default)
			Endicia recommends that the value of this element be set to TRUE.

Element	Туре	Size or Values	Description
NoWeekendDelivery	Text		For Express Mail only:
		TRUE	Request that mailpiece should NOT be delivered on a Saturday.
		FALSE	Request that mailpiece can be delivered on a Saturday (Default)
Services	Node		Special Services requested for the package.
CertifiedMail	Attribute	OFF ON	Certified Mail not requested. Certified Mail requested.
			The default value is ON for CertifiedMail label type; otherwise, it is OFF.
			Available for First-Class and Priority Mail.
COD	Attribute	OFF ON	COD not requested. (Default) COD requested. (must affix a completed COD Form 3816 to the mailpiece and take it to the retail USPS counter).
DeliveryConfirmation	Attribute	OFF ON	Delivery Confirmation not requested. Delivery Confirmation requested.
			The value of this element is automatically set by the Endicia Label Server based on other elements in the LabelRequest XML.
			Do not supply a value for this element. It will be ignored.

Element	Туре	Size or Values	Description
ElectronicReturnReceipt	Attribute	OFF ON	Electronic Return Receipt not requested. (Default) Electronic Return Receipt requested. To receive Electronic Return
			Receipt delivery information, the partner must be registered as a Bulk Proof of Delivery Client with the USPS and develop the software to download the extract file from USPS. The Mailer ID assigned by the USPS for this purpose must be specified in the BpodClientDUNSNumber element.
InsuredMail	Attribute	OFF ON	No insurance requested. (Default) USPS Insurance requested (must affix a completed Form 3813 or 3813-P to the
		UspsOnline	mailpiece and take it to the retail USPS counter). USPS Online Insurance requested.
		Endicia	Endicia Insurance requested (Maximum insurable value: \$10,000)
			USPS Online Insurance is available only for mailpieces with Delivery or Signature Confirmation.
			USPS insurance is not allowed for International Mail or when Stealth or ReplyPostage is set to TRUE.
			Endicia insurance fee is not included in the postage price. It is billed to your account.
RestrictedDelivery	Attribute	OFF ON	Restricted Delivery not requested. (Default) Restricted Delivery requested.

Element	Туре	Size or Values	Description
ReturnReceipt	Attribute	OFF ON	Return Receipt not requested. (Default) Return Receipt requested (must affix a completed Return Receipt Form 3811 to the mailpiece and take it to the retail USPS counter). Can only be used with label type of Default or DestinationConfirm. Not supported for International Mail.
SignatureConfirmation	Attribute	OFF ON	Signature Confirmation not requested. (Default) Signature Confirmation requested. Can only be used with label type of Default.
TrackingNumber	Text	22 14 12	Tracking number to use: PIC PLANET Code, 14-digit format PLANET Code, 12-digit format This element must not be supplied when label type is Domestic. Not used for international mail. Note: Use of the DestinationConfirm label type requires special approval from Endicia and the USPS. For further details, contact the Endicia Label Server Team.
CostCenter Value	Numeric Currency	8	Cost-center code for accounting purposes. Value of the mailpiece.
varue	Gurrency	0.2	When a customs form is requested and the individual customs item elements are not supplied, then this value should be set to the total customs value Ignored when CustomsInfo is supplied.

Element	Туре	Size or Values	Description
InsuredValue	Currency	5.2	Insured value of the mailpiece.
			Required if insurance or COD is requested for the mailpiece.
CODAmount	Currency	5.2	COD amount to collect.
			Required if COD is requested for the mailpiece.
Description	Text	50	Description of the item shipped. Used for authentication by recipient.
			When requesting an International Mail label or a customs form, a value is required if the LabelRequest XML does not contain any customs declaration elements.
IntegratedFormType	Text	Form2976 Form2976A	Form 2976 Form 2976-A
		7 611112-07 67 1	Required when label subtype is Integrated.
CustomsFormType	Text	None Form2976 Form2976A	No Customs Form (Default) Same as CN22 Same as CP72
			Used for APO/FPO and other destinations as required by USPS regulations.
			Do not use with integrated labels or international mail.
CustomsFormImageFormat	Text	GIF JPEG PDF PNG	GIF JPEG PDF PNG (Default)
			Do not use with integrated labels or international mail.
CustomsFormImageResolution	Text	300	300 dpi (default)
			Do not use with integrated labels or international mail.

Element	Туре	Size or Values	Description
OriginCountry	Text	50	Country of Origin of the item. This must be a valid, USPS recognized country.
			Required for International Mail items or when requesting a customs form.
			Ignored when CustomsInfo is supplied.
ContentsType	Text	Documents Gift Merchandise Other	Category of the customs items. Used in customs forms and international labels.
		ReturnedGoods	Default value is Other.
		Sample	Value of ReturnedGoods is <i>not</i> available for Priority Mail International Flat Rate Envelope and Customs Form 2976
			Ignored when CustomsInfo is supplied.
ContentsExplanation	Text	25	Explanation of the customs items. Used in customs forms and international labels.
			Required if ContentsType is Other.
			Ignored when CustomsInfo is supplied.
NonDeliveryOption	Text	Abandon Return	Non-delivery instructions.Used in customs forms and international labels.
			Treat as abandoned. Return to sender. (Default)
			Ignored when CustomsInfo is supplied.
ReferenceID	Text	50	A reference value for logs.
PartnerCustomerID	Text	25	A unique identifier for the partner's end-user printing the label
PartnerTransactionID	Text	25	A unique identifier for the partner's end-user's transaction such as invoice, transaction number, etc.

Element	Туре	Size or Values	Description
BpodClientDunsNumber	Numeric	9	Mailer ID of the partner assigned by USPS.
			Allows the partner to receive Electronic Return Receipt information from USPS in an extract file uniquely generated for them, provided they have established themselves with USPS as a Bulk Proof of Delivery Client.
RubberStamp1	Text	50	User-supplied text to print on the label.
			See Miscellaneous Notes & Features, for supported label types and sizes.
RubberStamp2	Text	50	User-supplied text to print on the label.
			See Miscellaneous Notes & Features, for supported label types and sizes.
RubberStamp3	Text	50	User-supplied text to print on the label.
			See Miscellaneous Notes & Features, for supported label types and sizes.
EntryFacility	Text		Postal facility where the mail is entered. If this element is not set to Other, the ZIP Code of this facility must be specified in POZipCode.
			Required for Parcel Select and Standard Mail.
		DBMC DDU DSCF	Destination BMC Destination Delivery Unit Destination Sectional Center Facility
		OBMC Other	Origin BMC Other postal facility (Default)

Element	Туре	Size or Values	Description
POZipCode	Text	5	ZIP Code of Post Office or collection box where item is mailed. May be different than FromPostalCode. Used for determining the zone and calculating the postage price.
			Required when EntryFacility is not set to Other. The value of this element must contain the zip code of the postal facility specified in EntryFacility.
ShipDate	Date	MM/DD/YYYY	Date mailpiece is shipped. Required for Express Mail Sunday/Holiday Delivery Service. Ignored for other mail classes.
ShipTime	Time	HH:MM AM or HH:MM PM	Time mailpiece is shipped. Applies only to Express Mail Sunday/Holiday Delivery Service. Ignored for other mail classes. If this element is not supplied, it defaults to 12:01 AM.
EelPfc	Text	35	Exemption or Exclusion Legend (EEL) or a Proof of Filing Citation (PFC).Required for shipments to an international destination or to an overseas U.S. Territory. It is recommended to supply a value for this element as the USPS will likely require it in the near future.
CustomsCertify	Text	TRUE FALSE	TRUE means the customs information is certified to be correct and the CustomsSigner name should be printed.

Element	Туре	Size or Values	Description
CustomsSigner	Text	47	Name of person certifying that the customs information is correct. This name prints on the customs form in place of a signature if CustomsCertify is TRUE.
			Required if CustomsCertify is TRUE.
ResponseOptions	Node		Optional XML elements to include in the LabelRequestResponse.
PostagePrice	Attribute	TRUE FALSE	TRUE means the response contains the PostagePrice node.
FromName	Text	47	Sender's name
			Either FromName or FromCompany must contain a value.
			For customs forms, this element must contain at least two words.
FromCompany	Text	47	Sender's company name
			Either FromName or FromCompany must contain a value.
ReturnAddress1	Text	47	First delivery address line of sender
ReturnAddress2	Text	47	Second delivery address line of sender
ReturnAddress3	Text	47	Third delivery address line of sender.
			Do not use when label type is Domestic or International and a label subtype value is supplied.
ReturnAddress4	Text	47	Fourth delivery address line of sender.
			Do not use when label type is Domestic or International and a label subtype value is supplied.
FromCity	Text	50	Sender's city
			Allowed characters: A-Z a-z hyphen period space
FromState	Text	25	Sender's state or province

Element	Туре	Size or Values	Description
FromPostalCode	Text	10	Sender's postal code. The format is either ZIP5 only or ZIP+4 for US addresses.
FromZIP4	Text	4	+4 add-on for US addresses.
			Ignored if FromPostalCode contains the ZIP4 value.
FromCountry	Text	50	Sender's country. This value should be left blank for USA addresses.
FromPhone	Text	10	Phone number of sender (required for Express Mail and international mail)
			10 digits required (including area code) with no punctuation. Use format: 2125551234
FromEMail	Text	64	E-mail address of sender.
ToName	Text	47	Recipient's name For Express Mail and international mail: Either ToName or ToCompany must contain a value.
ToCompany	Text	47	Recipient's company name For Express Mail and international mail: Either ToName or ToCompany must contain a value.
ToAddress1	Text	47	First delivery address line of recipient A value is optional only when ToCompany contains a value.
			Express Mail labels are limited to four lines in the destination address for all label sizes. 4X5 and 4x4.5 labels are limited to five lines in the
			destination address.
ToAddress2	Text	47	Second delivery address line of recipient
ToAddress3	Text	47	Third delivery address line of recipient.
			Do not use with label type of Domestic.

Element	Туре	Size or Values	Description
ToAddress4	Text	47	Fourth delivery address line of recipient.
			Do not use with label type of Domestic.
ToCity	Text	50	Recipient's city
			For Domestic Mail, allowed characters are: A-Z a-z hyphen period space
ToState	Text	25	Recipient's state or province.
			Required for Domestic Mail, optional for International Mail.
ToPostalCode	Text		Recipient's postal code.
		5	For Domestic Mail, the format is ZIP5 (required).
		15	For International Mail (optional).
ToZIP4	Text	4	+4 add-on for US addresses.
ToDeliveryPoint	Text	2	+2 Delivery Point for US addresses.
ToCountry	Text	50	Recipient's country.
			Refer to Country and Locality
			<u>Listing</u> , for a table of valid country names.
			Required for International Mail.
			Ignored when label type is
			International and a label subtype value is supplied. In
			this case, the ToCountryCode element must be used.
ToCountryCode	Text	2	Two-character country code of the recipient's country.
			Refer to <u>Country and Locality</u> <u>Listing</u> , for a table of valid country names.
			Required when label type is International and a label subtype value is supplied.

Element	Туре	Size or Values	Description
ToPhone	Text		Recipient's Phone Number.
		10	For Domestic mail: 10 digits including area code with no punctuation. For example: 2125551234. If supplied value is not in the correct format, it will be ignored.
		30	For International mail, up to 30 digits with no punctuation.
ToEMail	Text	64	E-mail address of recipient.
CustomsInfo	Node		Customs Declaration
			Required when using Integrated labels.
ContentsType	Text	Documents Gift Merchandise Other ReturnedGoods Sample	Category of the customs items. Value of ReturnedGoods is not available for labels using Form 2976.
ContentsExplanation	Text		Explanation of the customs items. Required if ContentsType is Other.
RestrictionType	Text	None Other Quarantine SanitaryPhytosanitaryInspection	Default
RestrictionCommments	Text	25	Required if RestrictionType is not None.
SendersCustomsReference	Text	14	Sender's customs reference,
ImportersCustomsReference	Text	40	Importers customs reference.
LicenseNumber	Text	16	License number.
CertificateNumber	Text	12	Certificate number.
InvoiceNumber	Text	15	Invoice number.
NonDeliveryOption	Text	Abandon Return	Non-delivery instructions. Treat as abandoned. Return to sender. (Default)
1 1	1	riciani	notarri to seriuer. (Delauit)

	Element	Туре	Size or Values	Description
E	TelPfc	Text	35	Exemption or Exclusion Legend (EEL) or a Proof of Filing Citation (PFC).Required for shipments to an international destination or to an overseas U.S. Territory. It is recommended to supply a
				value for this element as the USPS will likely require it in the near future.
C	CustomsItems	Node		Must contain at least 1 but no more than 30 CustomsItem nodes.
	CustomsItem		[1 30]	
	Description	Text	50	Description of the customs item.
	Quantity		3	Quantity of the customs item. Must be greater than zero.
	Weight	Numeric	4	Weight of the customs item. Must be specified in whole ounces and greater than zero and cannot exceed 1120 ounces (70 pounds).
	Value	Currency		Value of the customs item. Must be greater than zero.
	HSTariffNumber	Text	6	6-digit HS tariff number.
	CountryOfOrigin	Text	2	Two character country code of the country where the customs items originated.
				Refer to the <u>Country Code</u> <u>Table</u> for a list of valid country codes.
	The following five sets	of customs it	em elements are ignored whe	n CustomsInfo is supplied.
Cu	stomsDescription1	Text	50	Description of the first item in the customs declaration.
				If a value is supplied, then the remaining elements for the first item in the customs declaration must also contain a value.
				If a value is not supplied, then the remaining elements for the first item in the customs declaration are ignored.
				Required when requesting an International Mail label or a customs form.

Element	Туре	Size or Values	Description
CustomsQuantity1	Numeric	8	Quantity of first item in customs declaration.
			Required when requesting an International Mail label or a customs form.
CustomsWeight1	Numeric	4	Weight, in ounces, of first item in customs declaration. The value must be specified in whole ounces and greater than zero.
			Required when requesting an International Mail label or a customs form.
CustomsValue1	Currency	5.2	Value of the first item in the customs declaration.
			Required when requesting an International Mail label or a customs form.
CustomsCountry1	Text	50	Country of Origin for the first item in the customs declaration. This value replaces any value in the OriginCountry tag.
			Refer to <u>Country and Locality</u> <u>Listing</u> , for a table of valid country names.
CustomsDescription2			Description of the second item in the customs declaration.
			If a value is supplied, then the remaining elements for the second item in the customs declaration must also contain a value.
			If a value is not supplied, then the remaining elements for the second item in the customs declaration are ignored.
CustomsQuantity2	Numeric	8	Quantity of second item in customs declaration.
CustomsWeight2	Numeric	4	Weight, in ounces, of second item in customs declaration. The value must be specified in whole ounces and greater than zero.
Customs Value2	Currency	5.2	Value of the second item in the customs declaration.

Element	Туре	Size or Values	Description
CustomsCountry2	Text	50	Country of Origin for the second item in the customs declaration.
			Refer to <u>Country and Locality</u> <u>Listing</u> , for a table of valid country names
CustomsDescription3	Text	50	Description of the third item in the customs declaration.
			If a value is supplied, then the remaining elements for the third item in the customs declaration must also contain a value.
			If a value is not supplied, then the remaining elements for the third item in the customs declaration are ignored.
CustomsQuantity3	Numeric	8	Quantity of third item in customs declaration.
CustomsWeight3	Numeric	4	Weight, in ounces, of third item in customs declaration. The value must be specified in whole ounces and greater than zero.
CustomsValue3	Currency	5.2	Value of the third item in the customs declaration.
CustomsCountry3	Text	50	Country of Origin for the third item in the customs declaration.
			Refer to Country and Locality Listing, for a table of valid country names.
CustomsDescription4	Text	50	Description of the fourth item in the customs declaration.
			If a value is supplied, then the remaining elements for the fourth item in the customs declaration must also contain a value.
			If a value is not supplied, then the remaining elements for the fourth item in the customs declaration are ignored.
CustomsQuantity4	Numeric	8	Quantity of fourth item in customs declaration.

Element	Туре	Size or Values	Description
CustomsWeight4	Numeric	4	Weight, in ounces, of fourth item in customs declaration.
Customs Value4	Currency	5.2	Value of the fourth item in the customs declaration. The value must be specified in whole ounces and greater than zero.
CustomsCountry4	Text	50	Country of Origin for the fourth item in the customs declaration.
			Refer to <u>Country and Locality</u> <u>Listing</u> , for a table of valid country names.
CustomsDescription5	Text	50	Description of the fifth item in the customs declaration.
			If a value is supplied, then the remaining elements for the fifth item in the customs declaration must also contain a value.
			If a value is not supplied, then the remaining elements for the fifth item in the customs declaration are ignored.
CustomsQuantity5	Numeric	8	Quantity of fifth item in customs declaration.
CustomsWeight5	Numeric	4	Weight, in ounces, of fifth item in customs declaration. The value must be specified in whole ounces and greater than zero.
Customs Value 5	Currency	5.2	Value of the fifth item in the customs declaration.
CustomsCountry5	Text	50	Country of Origin for the fifth item in the customs declaration.
			Refer to <u>Country and Locality</u> <u>Listing</u> , for a table of valid country names.

LabelRequestResponse XML Syntax

The following table describes the XML tags for LabelRequestResponse.

Table 3-2: LabelRequestResponse XML Elements

Element	Туре	Size or Values	Description
LabelRequestResponse	Root	-	The root node for the XML response.
Status	Numeric	0 Error code	Indicates if the label request succeeded or failed: Success Failed. The response contains an ErrorMessage element describing the error.
ErrorMessage	Text	150	Error message - see Status For EPL2 and ZPLII, the label image contains binary data which should be sent to the Zebra printer without any intermediate conversion.
Base64LabelImage	Base64 string		Image of the label.

Element	Туре	Size or Values	Description
			If the Label node is present, then this element will not exist.
Label	Node		Contains one or more <image/> elements for each part of the label.
Image	Base64 string		First part of the label image.
PartNumber	Attribute, Numeric	1	
Image	Base64 string		Second part of the label image.
PartNumber	Attribute, Numeric	2	
:	:	:	:
Image	Base64 string		nth (last) part of the label image.
PartNumber	Attribute, Numeric	n	
CustomsForm	Node		Contains one or more <image/> elements for each part of the customs form.
Image	Base64 string		First part of the customs form image.
PartNumber	Attribute, Numeric	1	
Image	Base64 string		Second part of the customs form image.
PartNumber	Attribute, Numeric	2	
:	:	:	:
Image	Base64 string		nth (last) part of the customs form image.
PartNumber	Attribute, Numeric	n	
TrackingNumber	Text	Variable Length	For domestic mail, this value is also copied to the PIC element.
			For international mail and domestic mail using customs forms, this value is also copied to the CustomsNumbe element.
PIC	Text		Same as TrackingNumber. For domestic mail pieces only.
CustomsNumber	Text	13	Customs form number.
FinalPostage	Currency	6.3	Total postage and fees for transaction.
TransactionID	Numeric		Unique ID for transaction - corresponds to the piece count for the account used.
TransactionDateTime	Date and Time	YYYYMMDDHHMMSS	Date and time the transaction was created. Expressed in UTC.
PostmarkDate	Date	YYYYMMDD	Indicates the postmark date.

Element	Туре	Size or Values	Description
PostageBalance	Currency	6.3	Remaining postage balance after label is generated, in dollars and cents (mils).
PostagePrice	Node		Postage price for transaction.
TotalAmount	Attribute, Currency	6.3	Total amount of postage and fees. This value is also copied to the FinalPostage element.
Postage	Node		9
TotalAmount	Attribute, Currency	6.3	Total amount of postage.
MailService	Text	50	Mail Service.
Zone	Text	0 (local zone), 1 through 8	Number of postal rate zones between the sender's and recipient's ZIP Codes.
	_		Applies only to domestic mail.
IntraBMC	Text	true false	Zone is Intra-BMC. Zone is Inter-BMC.
			Applies only to domestic mail.
Pricing	Text	Commercial CommercialBase CommercialPlus NSA Retail	Commercial pricing. Commercial Base pricing. Commercial Plus pricing. NSA pricing. Retail pricing.
Fees	Node		3
TotalAmount	Attribute, Currency	6.3	Total amount of fees.
CertificateOfMailing	Currency	6.3	Certificate of Mailing fee. For future use.
CertifiedMail	Currency	6.3	Certified Mail fee.
CollectOnDelivery	Currency	6.3	Collect on Delivery (COD) fee. For future use.
DeliveryConfirmation	Currency	6.3	Delivery Confirmation fee.
ElectronicReturnReceipt	Currency	6.3	Electronic Return Receipt fee.
InsuredMail	Currency	6.3	Insured Mail fee.
RegisteredMail	Curronov	6.2	Only for USPS insured mailpieces.
RestrictedDelivery	Currency Currency	6.3 6.3	Registered Mail fee. Restricted Delivery fee.
RestrictedDelivery	Currency	0.3	For future use.
ReturnReceipt	Currency	6.3	Return Receipt fee.
ReturnReceiptForMerchandise		6.3	Return Receipt for Merchandise fee. For future use.
SignatureConfirmation	Currency	6.3	Signature Confirmation fee.
SpecialHandling	Currency	6.3	Special Handling fee. For future use.

</LabelRequestResponse>
```

4. BUYING POSTAGE API (REQUIRED)

RecreditRequest

To add postage to an account, use the BuyPostage or the BuyPostageXML Web method of the Endicia Label Server Web Service.

The following is a sample HTTP POST request for BuyPostageXML which requires a RecreditRequest XML string as input. The placeholders shown need to be replaced with actual values:

```
POST /LabelService/EwsLabelService.asmx/BuyPostageXML HTTP/1.1
Host: www.envmgr.com
Content-Type: application/x-www-form-urlencoded
Content-Length: length

recreditRequestXML=<RecreditRequest> ... </RecreditRequest>
```

The response contains a RecreditRequestResponse XML string:

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: length

<?xml version="1.0" encoding="utf-8"?>
<RecreditRequestResponse> ... </RecreditRequestResponse>
```

RecreditRequest XML Syntax

The following table describes the XML tags for RecreditRequest.

- Omitting any value causes the Endicia Label Server Web Service to use the default value for that element.
- *Italic* items are optional.

Table 4-1: RecreditRequest XML Elements

	Element	Туре	Size or Values	Description
Re	ecreditRequest	Root	-	The root node for the XML request.
	RequesterID	Text	50	Requester ID (also called Partner ID) is used to uniquely identify the system making the request. This ID is assigned by Endicia.
	RequestID	Text	50	Request ID to uniquely identify this Recredit request. This will be returned in response.
	CertifiedIntermediary	Node		Certified Intermediary (CI) account authentication information.
	AccountID	Numeric	6	Account ID for the Endicia postage account.

Element	Туре	Size or Values	Description
PassPhrase	Text	64	Pass Phrase for the Endicia postage account.
RecreditAmount			Amount of postage, in dollars, to add to the account. Either use a predefined amount from the list or enter any value up to 99999.99.
	Text	10 25 50 100 250 500 1000 2500 5000 7500 10000 20000	Predefined amounts: Add \$10.00 to the account. Add \$25.00 to the account. Add \$50.00 to the account. Add \$100.00 to the account. Add \$250.00 to the account. Add \$500.00 to the account. Add \$500.00 to the account. Add \$1,000.00 to the account. Add \$2,500.00 to the account. Add \$5,000.00 to the account. Add \$7,500.00 to the account. Add \$10,000.00 to the account. Add \$10,000.00 to the account. Add \$20,000.00 to the account.
	Currency	5.2	Any amount, at least \$10.00 and up to \$99,999.99, in unit of dollars and rounded to the nearest cent. The minimum amount of postage that can be purchased is \$10. The maximum amount is based on the settings of the account.

The following listing shows an example of the RecreditRequest XML.

Listing 4-1: RecreditRequest XML

RecreditRequestResponse XML Syntax

The following table describes the XML tags for RecreditRequestResponse.

Table 4-2: RecreditRequestResponse XML Elements

Element	Туре	Size or Values	Description
RecreditRequestResponse	Root	-	The root node for the XML response.
Status	Numeric	0 Error code	Indicates if the request to buy postage succeeded or failed: Success Failed. The response contains an ErrorMessage element describing the
			error.
ErrorMessage	Text	150	Error message - see Status.
RequesterID	Text	50	Return of Requester ID—based on input value.
RequestID	Text	50	Return of Request ID—based on input value.
CertifiedIntermediary	Node		Certified Intermediary (CI) account status.
AccountID	Numeric	6	Account ID for the Endicia postage account.
SerialNumber	Numeric	12	The Serial Number of the last item created on the account.
PostageBalance	Currency	6.3	Remaining postage balance after recredit in dollars and cents (mils)
AscendingBalance	Currency	6.3	Total amount of postage printed (after recredit) in dollars and cents (mils)
AccountStatus	Text	A	Account Status flag: Active
DeviceID	Text	12	The account's 12 character Device ID (that appears in the indicium).

The following listing shows an example of a RecreditRequestResponse XML.

Listing 4-2: RecreditRequestResponse XML

```
<RecreditRequestResponse>
    <Status>0</Status>
    <RequesterID>abcd</RequesterID>
    <RequestID>BP123</RequestID>

        <AccountID>123456</AccountID>
        <SerialNumber>789</SerialNumber>
        <PostageBalance>76.55</PostageBalance>
        <AscendingBalance>123.45</AscendingBalance>
        <AccountStatus>A</AccountStatus>
        <DeviceID>071V00123456</DeviceID>
        </CertifiedIntermediary>
        </RecreditRequestResponse>
```

Please note, the following information about purchasing postage and bank-to-bank postage payment options.

Postage Purchases

- Purchase Methods: Postage purchases are billed when a customer purchases postage.
- Payment Types: Visa, MasterCard, American Express, Discover-Novus, Diner's Club
 International, Carte Blanche, checks, and direct debits (ACH) from US-based checking accounts,
 and ACH Credit issued to the USPS Bank account will be accepted. Payment methods are subject
 to change at any time.
- When an account is initiated, the minimum postage purchase is \$10 and the maximum is \$500, and a customer's account may contain a maximum of \$500 of postage at any given time. An unlimited number of purchases can be made. No sales taxes are applicable to purchases of postage.

A customer may apply directly with Endicia's support staff (support@endicia.com) to have the postage purchase limits on an account increased after they have used the account and have established a postage buying pattern (usually a couple of weeks).

Endicia Bank-to-Bank Postage Payment Options

- ACH Withdrawal (Direct Debit):
 - With the ACH Withdrawal method, you provide information about your checking account, and Endicia will withdraw the funds directly from your checking account and add the amount to your Endicia postage account balance. Endicia uses the USPS-authorized Federal Automated Clearing House (ACH) system to handle all payments. The purchase process in the client works exactly the same way with this method, and you can buy postage at any time to increase the balance in your Endicia account. If this payment method is used, your payment limits can be increased beyond the standard \$500 restriction after an initial setup period. The following steps describe how to switch to direct debit:
 - 1. Log in to your online Endicia account at https://www.endicia.com/Account/LogIn/
 - 2. Select **Update Profile > Payment Method**.

- 3. Select the **Deduct from my Checking Account...** option.
- 4. Enter your checking account and routing number.

Alternately, you can also contact support@endicia.com by e-mail to switch.

• ACH Credit (or Push) to the US Postal Service:

The ACH Credit (Push) method allows you to transfer funds directly from your bank to the USPS. The USPS then transfers those funds to Endicia to add to your account balance. The primary advantages to this method are: no bank account information needs to be provided to Endicia and any amount of postage may purchased. For customers that prefer to purchase in large amounts, this can be quite advantageous. The following steps describe how to use this method.

- 1. Instruct your bank to send an ACH TRANSFER (NOT A WIRE TRANSFER) to the USPS "lockbox" at Citibank. The account number is 30564608 and the Citibank ABA routing transit number is 021000089.
- 2. Include your Endicia account number on the ACH Credit Transaction. Your bank may have a field for an "Invoice Number", "Order Number", "Individual or Company ID", or a note. If this information is omitted, your Endicia account cannot be credited for ten (10) business days or until another ACH transaction is made with your Endicia Account number in the proper field.
- 3. Your bank may require additional verification of the transfer. The vendor name for the transfer is the "US Postal Service (Endicia)" and the tax ID is 41-0760000
- 4. Expect the transfer to take 3-5 business to reach your Endicia account.

• Wire transfer to Endicia:

You may institute a wire transfer of funds from your bank to Endicia's bank account at Union Bank of California, and Endicia will subsequently transfer these funds into the USPS bank account. Please make sure to include your Endicia account number in the wire transfer notation field. CONTACT US at accounting@endicia.com if you are interested in this method. NOTE: There is a \$50 fee for each payment using this method.

• Pay by Check:

You may mail a check directly to Endicia to purchase postage. Make the check out to "Endicia Internet Postage", add your Endicia account number to the check or check stub, and mail to:

PSI Systems, Inc. Attn: Accounting Department 247 High St. Palo Alto, CA 94301-1041

The process to credit your account will take five business days after we receive the check. **Note**: There is a \$50 fee for each payment using this method.

5. CHANGING THE PASS PHRASE API (REQUIRED)

ChangePassPhraseRequest

To change the Pass Phrase for an account, use the ChangePassPhrase or the ChangePassPhraseXML Web method of the Endicia Label Server Web Service.

The following is a sample HTTP POST request for ChangePassPhraseXML, which requires a ChangePassPhraseRequest XML string as input. The **placeholders** shown need to be replaced with actual values:

```
POST /LabelService/EwsLabelService.asmx/ChangePassPhraseXML HTTP/1.1
Host: www.envmgr.com
Content-Type: application/x-www-form-urlencoded
Content-Length: length

changePassPhraseRequestXML=<ChangePassPhraseRequest> ...
</ChangePassPhraseRequest>
```

The response contains a ChangePassPhraseRequestResponse XML string:

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: length

<?xml version="1.0" encoding="utf-8"?>
<ChangePassPhraseRequestResponse> ... </ChangePassPhraseRequestResponse>
```

ChangePassPhraseRequest XML Syntax

The following table describes the XML tags for ChangePassPhraseRequest.

- Omitting any value causes the Endicia Label Server Web Service to use the default value for that element.
- *Italic* items are optional.

Table 5-1: ChangePassPhraseRequest XML Elements

Element	Туре	Size or Values	Description
ChangePassPhraseRequest	Root	-	The root node for the XML request.
RequesterID	Text		Requester ID (also known as Partner ID) is used to uniquely identify the system making the request. This ID is assigned by Endicia.
RequestID	Text		Request ID to uniquely identify this Recredit request. This will be returned in response.
CertifiedIntermediary	Node		Certified Intermediary (CI) account authentication information.

Element	Туре	Size or Values	Description
AccountID	Numeric	6	Account ID for the Endicia postage account.
PassPhrase	Text	64	Pass Phrase for the Endicia postage account
NewPassPhrase	Text	64	New Pass Phrase for the Endicia postage account. Pass Phrase must be at least 5
			characters long with a maximum of 64 characters. For added security, the Pass Phrase should be at least 10 characters long and include more than one word, use at least one uppercase and lowercase letter, one number and one non-text character (e.g. punctuation). A Pass Phrase which has been used previously will be rejected.

The following listing shows an example of the ChangePassPhraseRequest XML.

Listing 5-1: ChangePassPhraseRequest XML

ChangePassPhraseRequestResponse XML Syntax

The following table describes the XML tags for ChangePassPhraseRequestResponse.

Table 5-2: ChangePassPhraseRequestResponse XML Elements

Element	Туре	Size or Values	Description
ChangePassPhraseRequestResponse	Root	-	The root node for the XML response.
Status	Numeric	0 Error code	Indicates if the request to change Pass Phrase succeeded or failed: Success Failed. The response contains an ErrorMessage element describing the error.
ErrorMessage	Text	150	Error message - see Status.
RequesterID	Text		Return of Requester ID—based on input value.
RequestID	Text		Return of Request ID—based on input value.

The following listing shows an example of the ChangePassPhraseRequestResponse XML.

Listing 5-2: ChangePassPhraseRequestResponse XML

```
<ChangePassPhraseRequestResponse>
  <Status>0</Status>
```

<RequesterID>abcd</RequesterID>

<RequestID>CPP123</RequestID>

</ChangePassPhraseRequestResponse>

6. CALCULATING POSTAGE AND FEES API (SINGLE)

PostageRateRequest

To calculate the postage and fees for a single mailpiece, use the CalculatePostageRate or the CalculatePostageRateXML Web method of the Endicia Label Server Web Service.

The following is a sample HTTP POST request for CalculatePostageRateXML, which requires a PostageRateRequest XML string as input. You must replace the placeholders with actual values.

```
POST /LabelService/EwsLabelService.asmx/CalculatePostageRateXML HTTP/1.1
Host: www.envmgr.com
Content-Type: application/x-www-form-urlencoded
Content-Length: length

postageRateRequestXML=<PostageRateRequest> ... </PostageRateRequest>
```

The response contains a PostageRateResponse XML string:

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: length

<?xml version="1.0" encoding="utf-8"?>
<PostageRateResponse> ... </PostageRateResponse>
```

PostageRateRequest XML Syntax

The following table describes the XML tags for PostageRateRequest.

- Omitting any value causes the Endicia Label Server Web Service to use the default value for that element.
- *Italic* items are optional.

Table 6-1: PostageRateRequest XML Elements

Element	Туре	Size or Values	Description
PostageRateRequest	Root	-	The root node for the XML request.
RequesterID	Text	50	Requester ID (also called Partner ID) is used to uniquely identify the system making the request. This ID is assigned by Endicia.
CertifiedIntermediary	Node		Certified Intermediary (CI) account authentication information.
AccountID	Numeric	6	Account ID for the Endicia postage account.
PassPhrase	Text	64	Pass Phrase for the Endicia

Element	Туре	Size or Values	Description
			postage account.
MailClass	Text	Express First LibraryMail MediaMail ParcelPost ParcelSelect Priority StandardMail ExpressMailInternational FirstClassMailInternational	Domestic: Express Mail First-Class Mail Library Mail Media Mail Parcel Post Parcel Select Priority Mail Standard Mail International: Express Mail International First-Class Mail
Pricing	Text	PriorityMailInternational CommercialBase CommercialPlus Retail	Priority Mail International Commercial Base pricing. Commercial Plus pricing. Retail pricing.
			If this element is not supplied, pricing will be based on the MailClass and any qualified discounts available to AccountID. Important! If this element is set to CommercialPlus, but the account does not qualify for such pricing, the Web method will return an error.
WeightOz	Numeric	4.1	Weight of the package, in ounces.
MailpieceShape	Text	Card Letter Flat Parcel LargeParcel IrregularParcel OversizedParcel FlatRateEnvelope FlatRatePaddedEnvelope SmallFlatRateBox MediumFlatRateBox LargeFlatRateBox	Shape of the mailpiece. See the Mailpiece Shape Chart for more information. Starting in May 2009, FlatRateBox has been replaced with MediumFlatRateBox. The Flat Rate Padded Envelope is only available to qualifying Priority Mail Commercial Plus customers. The Label Server will return an error if this shape is used with any other pricing.
MailpieceDimensions	Node		Dimensions of the mailpiece. Required for calculating Cubic pricing and for Priority Mail mailpieces going to Zones 5-8 which are over 1 cubic foot. Ignored if MailpieceShape is set

Element	Туре	Size or Values	Description
			to either LargeParcel or OversizedParcel.
			All values must be in inches.

			ON	(Default) Restricted Delivery requested.
	ReturnReceipt	Attribute	OFF ON	Return Receipt not requested. (Default) Return Receipt requested.
	SignatureConfirmation	Attribute	OFF ON	Signature Confirmation not requested. (Default) Signature Confirmation requested.
Va	alue	Currency	5.2	Value of the item(s) in the mailpiece
C	ODAmount	Currency	5.2	COD amount to collect. Required if COD is requested for the mailpiece.
Ins	suredValue	Currency	5.2	Insured value of the mailpiece. Required if insurance or COD is requested for the mailpiece.
En	ntryFacility	Text		Postal facility where the mail is entered. The zip code of this facility must be specified in POZipCode.

Element	Туре	Size or Values	Description
			Required for Parcel Select and Standard Mail.
		DBMC DDU DSCF	Destination BMC Destination Delivery Unit Destination Sectional Center Facility
		OBMC Other	Origin BMC Other postal facility (Default)
FromPostalCode	Text	5	Sender's postal code. The format is ZIP5.
			For Parcel Select and Standard Mail, the value of this element contains the zip code of the posta facility specified in EntryFacility.
ToPostalCode	Text		Recipient's postal code.
		5	For Domestic Mail, the format is ZIP5 (required).
ToCountry	Text	15 50	For International Mail (optional). Recipient's country.
			Refer to Country and Locality Listing, for a table of valid country names. Required for International Mail. Use either ToCountry or
			ToCountryCode.
ToCountryCode	Text	2	Two character country code of the recipient's country.
			Refer to the <u>Country Code Table</u> for a list of valid country codes.
			Required for International Mail. Use either ToCountry or ToCountryCode.
ShipDate	Date	MM/DD/YYYY	Date mailpiece is shipped.
			Required for Express Mail Sunday/Holiday Delivery Service. Ignored for other mail classes.
ShipTime	Time	HH:MM AM or HH:MM PM	Time mailpiece is shipped.
			Applies only to Express Mail Sunday/Holiday Delivery Service. Ignored for other mail classes.
			If this element is not supplied, it defaults to 12:01 AM.

Element	Туре	Size or Values	Description
ResponseOptions	Node		Optional XML elements to include in the PostageRateResponse.
PostagePrice .	Attribute		TRUE means the response contains the PostagePrice node.

The following listing shows an example of the PostageRateRequest XML.

Listing 6-1: PostageRateRequest XML

PostageRateResponse XML Syntax

The following table describes the XML tags for PostageRateResponse.

Table 6-2: PostageRateResponse XML Elements

Element	Туре	Size or Values	Description
PostageRateResponse	Root	-	The root node for the XML response.
Status	Numeric	0 Error code	Indicates if the request to calculate postage succeeded or failed: Success Failed. The response contains an ErrorMessage element describing the error.
ErrorMessage	Text	150	Error message - see Status
RequesterID	Text	50	Return of Requester ID - based on input value.
Zone	Text	0 (local zone), 1 through 8	Number of postal rate zones between the sender's and recipient's ZIP Codes. Applies only to domestic mail.
Postage	Node		Postage price for requested mail service. The response will not contain this node if PostagePrice in
			ResponseOptions is set to TRUE.
MailService	Text	50	Mail Service.
Rate	Currency	6.3	Calculated postage price including all fees.

Element	Туре	Size or Values	Description
PostagePrice	Node		Postage price for requested Mail Service.
			The response contains this node only if PostagePrice in ResponseOptions is set to TRUE.
TotalAmount	Attribute, Currency	6.3	Total amount of postage and fees
Postage	Node		
TotalAmount	Attribute, Currency	6.3	Total amount of postage.
MailService	Text	50	Mail Service.

</PostageRateResponse>
```

7. CALCULATE POSTAGE AND FEES API (MULTIPLE)

PostageRatesRequest

To calculate the postage and fees for multiple mail classes for a mailpiece, use the CalculatePostageRates or the CalculatePostageRatesXML Web method of the Endicia Label Server Web Service.

The following is a sample HTTP POST request for CalculatePostageRatesXML, which requires a PostageRatesRequest XML string as input. You must replace the placeholders with actual values.

```
POST /LabelService/EwsLabelService.asmx/CalculatePostageRatesXML HTTP/1.1
Host: www.envmgr.com
Content-Type: application/x-www-form-urlencoded
Content-Length: length

postageRatesRequestXML=<PostageRatesRequest> ... </PostageRatesRequest>
```

The response contains a PostageRatesResponse XML string:

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: length

<?xml version="1.0" encoding="utf-8"?>
<PostageRatesResponse> ... </PostageRatesResponse>
```

PostageRatesRequest XML Syntax

The following table describes the XML tags for PostageRatesRequest.

- Omitting any value causes the Endicia Label Server Web Service to use the default value for that element.
- *Italic* items are optional.

Table 7-1: PostageRatesRequest XML Elements

Element	Туре	Size or Values	Description
PostageRatesRequest	Root	-	The root node for the XML request.
RequesterID	Text	50	Requester ID (also called Partner ID) is used to uniquely identify the system making the request. This ID is assigned by Endicia.
CertifiedIntermediary	Node		Certified Intermediary (CI) account authentication information.
AccountID	Numeric	6	Account ID for the Endicia postage account.

Element	Туре	Size or Values	Description
PassPhrase	Text	64	Pass Phrase for the Endicia postage account.
MailClass	Text	Domestic International	Calculate rates for all applicable domestic mail classes. Calculate rates for all applicable international mail classes.
WeightOz	Numeric	4.1	Weight of the package, in ounces.
MailpieceShape	Text	Card Letter Flat Parcel LargeParcel IrregularParcel OversizedParcel FlatRateEnvelope FlatRatePaddedEnvelope SmallFlatRateBox MediumFlatRateBox LargeFlatRateBox LargeFlatRateBox	Shape of the mailpiece. See the Mailpiece Shape Chart for more information.
MailpieceDimensions	Node		Dimensions of the mailpiece. Required for calculating Cubic pricing and for Priority Mail mailpieces going to Zones 5-8 which are over 1 cubic foot. Ignored if MailpieceShape is set to either LargeParcel or OversizedParcel. All values must be in inches.
Length	Numeric	3.3	Length of the mailpiece.
Width	Numeric	3.3	Width of the mailpiece.
Height	Numeric	3.3	Height (or thickness) of the mailpiece.
Machinable	Text	TRUE FALSE	Package is machinable. (Default) Package is non-machinable
Services	Node		Special Services requested for the package.
CertifiedMail	Attribute	OFF	Certified Mail not requested. (Default)

	Element	Туре	Size or Values	Description
			ON	Certified Mail requested.

				Required if COD is requested for the mailpied
Ins	suredValue	Currency	5.2	Insured value of the
l				mailpiece.

Element	Туре	Size or Values	Description
			Required if insurance or COD is requested for the mailpiece.
FromPostalCode	Text	5	Sender's postal code. The format is ZIP5.
ToPostalCode	Text		Recipient's postal code.
		5	For Domestic Mail, the format is ZIP5 (required).
		15	For International Mail (optional).
ToCountry	Text	50	Recipient's country.
			Refer to Country and Locality Listing, for a table of valid country names.
			Required for International Mail. Use either ToCountry or ToCountryCode.
ToCountryCode	Text	2	Two character country code of the recipient's country.
			Refer to the <u>Country Code</u> Table for a list of valid
			country codes.
			Required for International Mail. Use either ToCountry or ToCountryCode.

The following listing shows an example of the PostageRatesRequest XML.

Listing 7-1: PostageRatesRequest XML

PostageRatesResponse XML Syntax

The following table describes the XML tags for PostageRatesResponse.

Table 7-2: PostageRatesResponse XML Elements

Element	Туре	Size or Values	Description
ostageRatesResponse	Root	-	The root node for the XML response.
Status	Numeric	0 Error code	Indicates if the request to calculate postage succeeded or failed: Success Failed. The response contains an ErrorMessage element describing the error.
ErrorMessage	Text	150	Error message - see Status
RequesterID	Text	50	Return of Requester ID - based on input value.
PostagePrice	Node		Postage price for requested Mail Service.
			There may be multiple instances of this node for every applicable Mail Service.
TotalAmount	Attribute, Currency	6.3	Total amount of postage and fees.
Postage	Node		
TotalAmount	Attribute, Currency	6.3	Total amount of postage.
MailService	Text	50	Mail Service.
Zone	Text	0 (local zone), 1 through 8	Number of postal rate zones between the sender's and recipient's ZIP Codes. Applies only to domestic mail.
IntraBMC	Text	true false	Zone is Intra-BMC. Zone is Inter-BMC. Applies only to domestic mail.
Pricing	Text		Commercial pricing. Commercial Base pricing. Commercial Plus pricing. NSA pricing. Retail pricing.
Fees	Node		
TotalAmount	Attribute, Currency	6.3	Total amount of fees.
CertificateOfMailing	Currency	6.3	Certificate of Mailing fee. For future use.
CertifiedMail	Currency	6.3	Certified Mail fee.
CollectOnDelivery	Currency	6.3	Collect on Delivery (COD) fee.
DeliveryConfirmation	Currency	6.3	Delivery Confirmation fee.

	Element	Туре	Size or Values	Description
	ElectronicReturnReceipt	Currency	6.3	Electronic Return Receipt fee.
	InsuredMail	Currency	6.3	Insured Mail fee.
				Only for USPS insured mailpieces.
	RegisteredMail	Currency	6.3	Registered Mail fee. For future use.
	RestrictedDelivery	Currency	6.3	Restricted Delivery fee.
	ReturnReceipt	Currency	6.3	Return Receipt fee.
	ReturnReceiptForMerchandise	Currency	6.3	Return Receipt for Merchandise fee. For future use.
	SignatureConfirmation	Currency	6.3	Signature Confirmation fee.
	SpecialHandling	Currency	6.3	Special Handling fee. For future use.

8. GETTING ACCOUNT STATUS API

AccountStatusRequest

To get the status of an account, use the GetAccountStatus or the GetAccountStatusXML Web method of the Endicia Label Server Web Service. For accounts with an Active status, the response contains other useful information, such as the remaining postage balance in the account.

The following is a sample HTTP POST request for GetAccountStatusXML which requires an AccountStatusRequest XML string as input. Replace the placeholders with actual values:

```
POST /LabelService/EwsLabelService.asmx/GetAccountStatusXML HTTP/1.1
Host: www.envmgr.com
Content-Type: application/x-www-form-urlencoded
Content-Length: length
accountStatusRequestXML=<AccountStatusRequest> ... </AccountStatusRequest>
```

The response contains an AccountStatusResponse XML string:

```
HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: length

<?xml version="1.0" encoding="utf-8"?>
<AccountStatusResponse> ... </AccountStatusResponse>
```

AccountStatusRequest XML Syntax

The following table describes the XML tags for AccountStatusRequest.

- Omitting any value causes the Endicia Label Server Web Service to use the default value for that element.
- *Italic* items are optional.

Table 8-1: AccountStatusRequest XML Elements

Element	Туре	Size or Values	Description
AccountStatusRequest	Root	-	The root node for the XML request.
RequesterID	Text	50	Requester ID (also called Partner ID) is used to uniquely identify the system making the request. This ID is assigned by Endicia.
RequestID	Text	50	Request ID to uniquely identify this Account Status request. This will be returned in response.
CertifiedIntermediary	Node		Certified Intermediary (CI) account authentication information.
AccountID	Numeric	6	Account ID for the Endicia postage account.
PassPhrase	Text	64	Pass Phrase for the Endicia postage account.

The following listing shows an example of the AccountStatusRequest XML.

Listing 8-1: AccountStatusRequest XML

AccountStatusResponse XML Syntax

The following table describes the XML tags for AccountStatusResponse.

Table 8-2: AccountStatusResponse XML Elements

Element	Туре	Size or Values	Description
AccountStatusResponse	Root	-	The root node for the XML response.
Status	Numeric	0 Error code	Indicates if the account status request succeeded or failed: Success Failed. The response contains an ErrorMessage element describing the error.
ErrorMessage	Text	150	Error message - see Status
RequesterID	Text	50	Return of Requester ID - based on input value.
RequestID	Text	50	Return of Request ID - based on input value.

Element	Туре	Size or Values	Description
CertifiedIntermediary	Node		Certified Intermediary (CI) account status.
			This node will only be present for an account with an Active status.
AccountID	Numeric	6	Account ID for the Endicia postage account.
SerialNumber	Numeric	12	The Serial Number of the last item created on the account.
PostageBalance	Currency	6.3	Remaining postage balance in dollars and cents (mils).
AscendingBalance	Currency	6.3	Total amount of postage printed in dollars and cents (mils).
AccountStatus	Text	A	Account Status flag: Active
DeviceID	Text	12	The account's 12 character Device ID (that appears in the indicium).

The following listing shows an example of an AccountStatusResponse XML.

Listing 8-2: AccountStatusResponse XML

9. REQUESTING A REFUND API

RefundRequest

If you are developing software for use by multiple customers and thus will be maintaining multiple accounts, this chapter demonstrates an automated Web Service that allows your customers to submit refund requests more efficiently. You can collect all the needed information and just submit it through this API. In return, you will receive an acknowledgement message.

Important! The URL for this service is <u>distinct and different</u> than the Endicia Label Server Web Service URL. You will receive this unique URL for this API with the "Welcome" e-mail message.

RefundRequest XML Syntax

The following table describes the XML tags for RefundRequest.

- Omitting any value causes the Refund Web Service to use the default value for that element.
- *Italic* items are optional.
- The RefundList Node can have many Sub Nodes to do a list of shipments that need refunding.
- As a rule a tracking number is the PICNumber for a shipment. The technical term will always be PICNumber, but it is commonly referred to as a tracking number.
- You do not need both the PICNumber and PieceID for a refund, only one or the other. They are both in the API to give a choice as to which to use.
- You only need to submit one PieceID or one PICNumber per shipment each time you want to request a refund.
- It is recommended that you submit no more than 100 requests in a single XML transaction. If you submit more than 100 requests in a single XML transaction, your request may time out.
- If you include your Pass Phrase in the request, you do not need to submit your Web Password.

Table 9-1: RefundRequest XML Elements

	Element	Туре	Size or Values	Description
RefundRequest		Root	-	The root node for the XML request.
	AccountID	Numeric		Account ID for the Endicia postage account.
	WebPassword	Text		Customer's Web Password. Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element.

Element	Туре	Size or Values	Description
PassPhrase	Text	64	Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element.
Test	Text	Y or N	Is this a test request?
RefundList	Node	-	Container Node For the Refund List
PICNumber	Numeric	30	Package PIC Number (Tracking Number)
CustomsID	Text	25	Package Customs ID (GPM and GAPP tracked shipments only)
PieceID	Numeric	10	Package Piece ID

The following listing shows an example of the RefundRequest XML for the Refund Request API.

Listing 9-1: RefundRequest XML

RefundResponse XML Syntax

The following table describes the XML tags for RefundResponse.

Table 9-2: RefundResponse XML Elements (XMLInput Parameter)

Element	Туре	Size or Values	Description
RefundResponse	Root	-	The root node for the XML response.
AccountID	Numeric	6	Account ID for the Endicia postage account.
ErrorMsg	Text	-	Account Login Error Message

	Element	Туре	Size or Values	Description
FormNu	FormNumber		6	Form Number for Refunded Shipments (Only for those approved)
Test		Text	Y or N	Is this a test request?
Refund	RefundList		-	Container Node For the Refund List
PIC	Number	Numeric	30	Package PIC Number
	IsApproved	Boolean		YES OR NO
	ErrorMsg	Text		If approved or disapproved, this indicates why.
Pie	ceID	Numeric	10	Package Piece ID
	IsApproved	Boolean		YES OR NO
	ErrorMsg	Text		If approved or disapproved, this will say why
Cus	stomsID	Text	25	Package Customs ID (For GPM and GAPP tracked shipments only)
	IsApproved	Boolean		YES OR NO
	ErrorMsg	Text		If approved or disapproved, this will say why

The following listing shows an example of the RefundResponse XML (XMLInput Parameter).

Listing 9-2: RefundResponse XML (XMLInput Parameter)

```
<?xml version="1.0" encoding="UTF-8"?>
<RefundResponse>
       <AccountID></AccountID>
       <ErrorMsg></ErrorMsg>
       <FormNumber></FormNumber>
       <Test></Test>
       <RefundList>
               <PICNumber>
                      <IsAppoved></IsApproved>
                       <ErrorMsg></ErrorMsg>
               </PICNumber>
               <PieceID>
                       <IsAppoved></IsApproved>
                       <ErrorMsg></ErrorMsg>
               </PieceID>
               <CustomsID>
                       <IsApproved></IsApproved>
                       <ErrorMsg></ErrorMsg>
               </CustomsID>
       </RefundList>
</RefundResponse>
```

Using form submission: To use this API with a form submission, you must declare both the method and the XML's parameter name in the submission.

Example:

```
<form name="RefundRequest"
    method="POST"
    action="URL TO API&method=RefundRequest">
        <input type="hidden" name="XMLInput" value="XML (Formatted as above)">
</form>
```

OR (through cURL in PHP):

```
$xml = XML (Formatted as above);
$curl_handle = curl_init ();

curl_setopt ($curl_handle, CURLOPT_URL, 'URL TO API');
curl_setopt ($curl_handle, CURLOPT_FOLLOWLOCATION, 1);
curl_setopt ($curl_handle, CURLOPT_RETURNTRANSFER, 1);
curl_setopt ($curl_handle, CURLOPT_SSL_VERIFYPEER, 0);
curl_setopt ($curl_handle, CURLOPT_POST, 1);
curl_setopt ($curl_handle, CURLOPT_POSTFIELDS,
  '&method=RefundRequest&XMLInput=' . $xml);
$curl_result = curl_exec ($curl_handle) or die ("There has been a CURL_EXEC error");
curl_close ($curl_handle);
echo $curl_result;
```

Example using SOAP submission (with PHP)

RefundRequest Error Codes

Error Code String	Error Message		
Login Failed	Given in the root node, occurs if the account number or password is incorrect.		
Denied - Must be within 10 days.	Means that the refund was not requested within 10 days of the postage purchase. For electronic refunds this must always be within that 10-day period. (USPS rule)		
Denied - Endicia Printable Postage is not neligible for refund.	You should never get this error, it is added in for completeness. We have another product Endicia Printable Postage that cannot ever be refunded.		
Denied – Invalid	Given if the ID sent was empty.		

Error Code String	Error Message	
ii jenjen - Rejijing alreany sjinmilijen	Given if there already has been a refund request on this item.	
II IANIAA - NIAT FALINA	Given if there isn't any transaction in our system with that particular ID.	
1 ''	All is well, Your refund has been submitted and approved.	

10. SIGNING UP FOR AN ACCOUNT API

UserSignupRequest

If you are developing software for use by multiple customers and thus will be maintaining multiple accounts, this chapter demonstrates an automated Web Service that will allow your customers to sign up for accounts more efficiently. You can collect all the needed information and just submit it through this API. In return, you will get an acknowledgement message back. The actual account number will still be returned through a separate e-mail message and that will still need to be associated with the account in a separate step. This is necessary to maintain the security model of creating accounts.

Important! The URL for this service is <u>distinct and different</u> than the Endicia Label Server Web Service URL. You will receive this unique URL for this API with the "Welcome" e-mail message.

UserSignupRequest XML Syntax

The following table describes the XML tags for UserSignupRequest.

Important notes about all elements:

- Omitting any value will cause the Account Signup API to use the default value for that element.
- *Italic* items are optional.
- After signing up, the account number will be sent by e-mail message to the customers e-mail address. It will not be sent in the reply. This is for security reasons. In the event of the account number being lost, it can be found using the confirmation number sent in the reply.

Important notes about certain elements:

- **CompanyName**: The # symbol will be replaced with "No.".
- PhoneNumber, PhoneNumberExtension, PhysicalZipCode, MailingZipCode, and FaxNumber: Spaces, dashes and periods will be stripped.

Table 10-1: UserSignupRequest XML Elements (XMLInput Parameter)

Element	Туре	Size or Values	Description
UserSignupRequest	Root	-	The root node for the XML request.
CompanyName	Text	100	Name of the Customer's Company
Test	Text	Y or N	Is this a test request?
FirstName	Text	25	Customer's First Name
MiddleInitial	Text	25	Customer's Middle Initial
LastName	Text	50	Customer's Last Name

Element	Туре	Size or Values	Description
Title	Text	50	Customer's Contact Title
EmailAddress	Text	120	Customer's E-mail Address
EmailConfirm	Text	120	Customer's E-mail Address for error checking
PhoneNumber	Numeric	0-9 (xxx-xxx-xxxx)	Customer's Phone Number
PhoneNumberExtension	Numeric	0-9	Customer's Phone Number Extention
ICertify	Text	Y	I certify that all information furnished is accurate and truthful. I also certify that I have read and understand the <u>United States</u> Postal Service Privacy Act Statement, PC Postage Privacy Principles, and all their contents.
FaxNumber	Text	0-9	Customer's Fax Number
PhysicalAddress	Text	200	Customer's Physical Address
PhysicalCity	Text	100	Customer's Physical City
PhysicalState	Text	2	Customer's Physical State (CA, MN, ND, SD, etc.)
PhysicalZipCode	Text	0-9 (xxxxx or xxxxx- xxxx)	Customer's Physical ZIP Code
MailingAddress	Text	200	Customers Mailing Address (if different than physical)
MailingCity	Text	100	Customers Mailing City (if different than physical)
MailingState	Text	2	Customers Mailing State (if different than physical)

Element	Туре	Size or Values	Description
MailingZipCode	Text	0-9 (xxxxx or xxxxx- xxxx)	Customers Mailing ZIP Code (if different than physical)
WebPassword	Text	17	Customers Web Password (Needs to be 5-50 characters)
			Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element.
PassPhrase	Text	64	Customers Account Pass Phrase (Needs to be 5-50 characters)
			Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element.
ChallengeQuestion	Text	200	Question to be asked if the password is forgotten (Needs to be at least 5 characters)
ChallengeAnswer	Text	100	The answer to the Challenge Phrase (Needs to be at least 5 characters)
BillingType	Text	TS	Type of billing (TS Default for LABELSERVER Product)
PartnerId	Text	4	The unique ID we give you.
ProductType	Text	LABELSERVER	Type of account you are signing up for
CreditCardNumber	Numerical	0-9	Credit Card Number
CreditCardAddress	Text	200	Address used with credit card
CreditCardCity	Text	100	City used for the credit card
CreditCardState	Text	2	State used with the credit card (CA, MN, ND, SD, etc.)
CreditCardZipCode	Text	0-9 (xxxxx or xxxxx- xxxx)	ZIP Code used with the credit card

Element	Туре	Size or Values	Description
CreditCardType	Text	V (Visa) M (MasterCard) A (American Express) B (Carte Blanche) N (Discover/Novis) D (Diners Club)	Credit card value
CreditCardExpMonth	Numerical	01 02 03 04 	Two digit representation of the credit card expiration month
CreditCardExpYear	Numerical	2005 2006 2007 	Four digit representation of the credit card expiration year
PaymentType	Text	CC ACH	Credit Card or Checking Account (respectively)
CheckingAccountNumber	Numerical	0-15	Checking account number (Required if Payment Type is ACH)
CheckingAccountRoutingNumber	Numerical	0-15	Routing Number of checking account (Required if payment type is ACH)
OverrideEmailCheck	Text	Y or N	Removes Duplicate E-mail Address Check.

The following listing shows a syntax example of the UserSignupRequest XML for the Account Signup API

Listing 10-1: UserSignupRequest XML (XMLInput Parameter)

```
<?xml version="1.0" encoding="utf-8"?>
<UserSignupRequest>
       <Test></Test>
       <CompanyName></CompanyName>

       <PhysicalZipCode></PhysicalZipCode>
       <MailingAddress></MailingAddress>
```

```
<MailingCity></MailingCity>
       <MailingState></MailingState>
       <MailingZipCode></MailingZipCode>
       <WebPassword></WebPassword>
       <PassPhrase></PassPhrase>
       <ChallengeQuestion></ChallengeQuestion>
       <ChallengeAnswer></ChallengeAnswer>
       <BillingType></BillingType>
       <PartnerId></PartnerId>
       <ProductType></ProductType>
       <CreditCardNumber></CreditCardNumber>
       <CreditCardAddress></CreditCardAddress>
       <CreditCardCity></CreditCardCity>
       <CreditCardState></CreditCardState>
       <CreditCardZipCode></CreditCardZipCode>
       <CreditCardType></CreditCardType>
       <CreditCardExpMonth></CreditCardExpMonth>
       <CreditCardExpYear></CreditCardExpYear>
       <PaymentType></PaymentType>
       <CheckingAccountNumber></CheckingAccountNumber>
       <CheckingAccountRoutingNumber></CheckingAccountRoutingNumber>
       <OverrideEmailCheck>N</OverrideEmailCheck>
</UserSignupRequest>
```

UserSignupResponse XML Syntax

The following table describes the XML tags for UserSignupResponse.

Table 10-2: UserSignupResponse XML Elements

Element	Туре	Size or Values	Description
UserSignupResponse	Root		The root node for the XML response.
ErrorMsg	Text	150	Error message
ConfirmationNumber	Numerical	6	Confirmation Number of sign-up
Test	Text	Y or N	Is this a test request?
DateTime	Text	"mm/dd/yyyy – hh:mm:ss GMT"	Date and Time of Signup
ProductType	Text	LABELSERVER	Echoes your product

The following listing shows an example of the UserSignupResponse XML.

Listing 10-2: UserSignupResponse XML

Table 10-3: UserSignupResponse Error Codes

Error Code String	Error Message
XMLInput Error	XMLInput improperly formatted.
We have detected that you already have an account with this	Do you really want another account?
email address	Use <overrideemailcheck></overrideemailcheck> .
You must include your first name	Error returned for missing node.
You must include your last name	Error returned for missing node.
You must include your email address	Error returned for missing node.
You must include the confirmation of your email address	Error returned for missing node.
You must include your phone number	Error returned for missing node.
You must state that you agree to our terms and conditions	Error returned for missing node.
You must include your physical address	Error returned for missing node.
You must include your physical city	Error returned for missing node.
You must include your physical state	Error returned for missing node.
You must include your physical zip code	Error returned for missing node.
You must include your Web password	Error returned for missing node.
You must include your pass phrase	Error returned for missing node.
You must include your challenge question	Error returned for missing node.
You must include your challenge answer	Error returned for missing node.
You must include the credit card number	Error returned for missing node.
You must include the credit card address	Error returned for missing node.
You must include the credit card city	Error returned for missing node.
You must include the credit card state	Error returned for missing node.
You must include the credit card zip code	Error returned for missing node.
You must include the credit card type	Error returned for missing node.
Physical Address Does Not Exist.	Error returned for invalid data.
Mailing Address Does Not Exist.	Error returned for invalid data.
You Must Agree to the Terms and Conditions	Error returned for invalid data.
You must enter your first name	Error returned for invalid data.
You must enter your physical address	Error returned for invalid data.
You must enter your physical city	Error returned for invalid data.
You must enter your physical state	Error returned for invalid data.

You must enter your physical zip code	Error returned for invalid data.
You have entered an invalid physical zip code, must be an integer	Error returned for invalid data.
You have entered an invalid physical zip code, must be 5 or 9 digits	Error returned for invalid data.
The Internet Password and the Pass Phrase cannot be the same.	Error returned for invalid data.
The Challenge Phrase and the Challenge Answer cannot be the same.	Error returned for invalid data.
Your Internet Password is too small. It must be between 5 and 17 characters.	Error returned for invalid data.
Your Pass Phrase is too small. It must be between 5 and 64 characters.	Error returned for invalid data.
Your Challenge Question is too small. It must be between 5 and 50 characters.	Error returned for invalid data.
Your Challenge Answer is too small. It must be between 5 and 50 characters.	Error returned for invalid data.
Credit card month invalid.	Error returned for invalid billing data.
You must include the credit card expiration month	Error returned for invalid billing data.
Credit card year invalid.	Error returned for invalid billing data.
You must include the credit card expiration year	Error returned for invalid billing data.
You must include the postage payment type	Error returned for invalid billing data.
You must include the product type	Error returned for invalid billing data.
Billing type not found	Error returned for invalid billing data.
Postage payment type not found, must be CC or ACH	Error returned for invalid billing data.
Please select a Credit Card Type.	Error returned for invalid billing data.
Please select a Credit Card Expiration Date.	Error returned for invalid billing data.
Please select a Credit Card Expiration Date.	Error returned for invalid billing data.
Invalid Expiration Year, the year cannot be less than the current year.	Error returned for invalid billing data.
Invalid Expiration Month, the month cannot be less than the current month.	Error returned for invalid billing data.
Card number and card type do not match.	Error returned for invalid billing data.
Card number seems to be missing digits.	Error returned for invalid billing data.
Does not appear to be a supported card.	Error returned for invalid billing data.
Credit card number does not appear valid.	Error returned for invalid billing data.
Credit Card Number Can Only Contain Digits 0-9	Error returned for invalid billing data.
No credit card number entered.	Error returned for invalid billing data.
If paying by ACH you must include your checking account number	Error returned for invalid billing data.
Your checking account number seems to be invalid	Error returned for invalid billing data.
If paying by ACH you must include your routing number	Error returned for invalid billing data.
Your checking routing number seems to be invalid	Error returned for invalid billing data.
	1 212 212 2 313 2 313 2 3 3 3 3 3 3 3 3

Using form submission: To use this API with a form submission you must declare both the method and the XML's parameter name in the submission.

Example:

```
<form name="UserSignupRequest"
    method="POST"
    action="URL TO API?method=UserSignup">
        <input type="hidden" name="XMLInput" value="XML (Formatted as above)">
</form>
```

OR (through cURL in PHP):

```
$xml = XML (Formatted as above);
$curl_handle = curl_init ();

curl_setopt ($curl_handle, CURLOPT_URL, 'URL TO API');
curl_setopt ($curl_handle, CURLOPT_FOLLOWLOCATION, 1);
curl_setopt ($curl_handle, CURLOPT_RETURNTRANSFER, 1);
curl_setopt ($curl_handle, CURLOPT_SSL_VERIFYPEER, 0);
curl_setopt ($curl_handle, CURLOPT_POST, 1);
curl_setopt ($curl_handle, CURLOPT_POSTFIELDS, '&method=UserSignup&XMLInput='.$xml);
$curl_result = curl_exec ($curl_handle) or die ("There has been a CURL_EXEC error");
curl_close ($curl_handle);
echo $curl_result;
```

Example using SOAP submission (with PHP)

11. REQUESTING PACKAGE STATUS API

StatusRequest

If you are developing software for use by multiple customers and thus will be maintaining multiple accounts, this chapter demonstrates an automated Web Service that allows your customers to submit status requests more efficiently. You can collect all the needed information and just submit it through this API. In return, you will get an acknowledgement message back.

Important! The URL for this service is <u>distinct and different</u> than the Endicia Label Server Web Service URL. You will receive this unique URL for this API with the "Welcome" e-mail message.

StatusRequest XML Syntax

The following table describes the XML tags for StatusRequest.

Important notes about all elements:

- Omitting any value will cause the Status Web Service to use the default value for that element.
- *Italic* items are optional.
- The StatusList Node can have many sub-nodes to do a list of shipments that need searching.
- As a rule a tracking number is the PICNumber for a shipment. The technical term will always be PICNumber, but it is commonly referred to as a tracking number.
- You do not need both the PICNumber and PieceID for a status request, just one or the other. They are both in the API to give a choice as to which to use.
- You only need to submit one PieceID or one PICNumber per shipment each time you want to request a status.
- The API is limited to 100 items per request.
- If you include your Pass Phrase in the request, you do not need to submit your Web password.

Table 11-1: StatusRequest XML Elements (XMLInput Parameter)

Element	Туре	Size or Values	Description
StatusRequest	Root	-	The root node for the XML request.
AccountID	Numeric	6	Account ID for the Endicia postage account.
Test	Text	Y or N	Is this a test request?
WebPassword	Text	17	Customer's Web Password. Important! You must use either the WebPassword or the PassPhrase element.The WebPassword element is optional if you use the PassPhrase element.
PassPhrase	Text	64	Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element.
StatusList	Node	-	Container Node For the Status List – Limited to any mixture of 100 of the following node types: PICNumber, CustomsID, and PieceID.
PICNumber	Numeric	30	Package PIC Number (Tracking Number)
CustomsID	Text	25	Package Customs ID (GPM and GAPP tracked shipments only)
PieceID	Numeric	10	Package Piece ID

The following listing shows a syntax example of the StatusRequest XML for the Refund Request API.

Listing 11-1: StatusRequest XML

StatusResponse XML Syntax

The following table describes the XML tags for StatusResponse.

Table 11-2: StatusResponse XML Elements

Element	Туре	Size or Values	Description
StatusResponse	Root	-	The root node for the XML response.
AccountID	Numeric	6	Account ID for the Endicia postage account.
ErrorMsg	Text	-	Account Login Error Message
Test	Text	Y or N	Is this a test request?
StatusList	Node	-	Container Node For the Status List
PICNumber	Numeric	30	Package PIC Number
Status	Text		Status of the Shipment
StatusCode	Text	1	USPS Status Code of the Shipment
PieceID	Numeric	10	Package Piece ID
Status	Text		Status of the Shipment
StatusCode	Text	1	USPS Status Code of the Shipment
CustomsID	Text	25	Package Customs ID (For GPM and GAPP tracked shipments only)
Status	Text		Status of the Shipment
StatusCode	Text	1	USPS Status Code of the Shipment

The following listing shows an example of the StatusResponse XML.

Listing 11-2: StatusResponse XML

```
<?xml version="1.0" encoding="UTF-8"?>
<StatusResponse>
       <AccountID></AccountID>
       <ErrorMsg></ErrorMsg>
       <Test></Test>
       <StatusList>
               <PICNumber>
                       <Status></Status>
                       <StatusCode></StatusCode>
               </PICNumber>
               <PieceID>
                       <Status></Status>
                       <StatusCode></StatusCode>
               </PieceID>
               <CustomsID>
                       <Status></Status>
                       <StatusCode></StatusCode>
               </CustomsID>
        </StatusList>
</StatusResponse>
```

Using form submission: To use this API with a form submission, you must declare both the method and the XML's parameter name in the submission.

Example:

```
<form name="StatusRequest"
    method="POST"
    action="URL TO API&method=StatusRequest">
        <input type="hidden" name="XMLInput" value="XML (Formatted as above)">
</form>
```

OR (through cURL in PHP):

```
$xml = XML (Formatted as above);
$curl_handle = curl_init ();

curl_setopt ($curl_handle, CURLOPT_URL, 'URL TO API');
curl_setopt ($curl_handle, CURLOPT_FOLLOWLOCATION, 1);
curl_setopt ($curl_handle, CURLOPT_RETURNTRANSFER, 1);
curl_setopt ($curl_handle, CURLOPT_SSL_VERIFYPEER, 0);
curl_setopt ($curl_handle, CURLOPT_POST, 1);
curl_setopt ($curl_handle, CURLOPT_POSTFIELDS,
'&method=StatusRequest&XMLInput=' . $xml);
$curl_result = curl_exec ($curl_handle) or die ("There has been a CURL_EXEC error");
curl_close ($curl_handle);
echo $curl_result;
```

Example using SOAP submission (with PHP)

StatusRequest Error Codes

Error Code String	Error Message
Login Failed	Given in the root node, occurs if the account number or password is incorrect.
Not Found	Happens if the item does not belong to the account making the request, or the item is not in our system at all.
	Happens if the USPS has not updated the status of the item, but it is found in our system.

StatusCode Definitions

Note: These are not exact definitions.

Error Code String	Error Message
-1	Not Found
0	Found – No Status
Α	Logged at USPS
I	Scanned in Route
D	Delivered
L	Notice Left for Recipient
F	Forwarded to New Address
R	Returned to Sender
U	Undeliverable
N	New Item
X	Other

12. REQUESTING TRANSACTION LISTS API

GetTransactionsListing

If you are developing software for use by multiple customers and thus will be maintaining multiple accounts, this chapter demonstrates an automated Web Service that allows your customers to get transaction listings more efficiently. You can collect all the needed information and just submit it through this API. In return, you will get an acknowledgement message back.

Important! The URL for this service is <u>distinct and different</u> than the Endicia Label Server Web Service URL. You will receive this unique URL for this API with the "Welcome" e-mail message.

GetTransactionsListing XML Syntax

The following table describes the XML tags for GetTransactionsListing.

Important notes about all elements:

- Omitting any value will cause the Get Transactions Listing Web Service to use the default value for that element.
- *Italic* items are optional.
- The TrackingList Node can have many Sub Nodes to do a list of shipments that need searching.
- As a rule a tracking number is the PICNumber for a shipment. The technical term will always be PICNumber, but it is commonly referred to as a tracking number.
- You do not need both the PICNumber and PieceID for a status request, just one or the other. They are both in the API to give a choice as to which to use.
- You only need to submit one PieceID or one PICNumber per shipment each time you want to request a status. GetTransactionListing returns a maximum of 50 results per request.
- Date ranges are limited to 7 days.
- The maximum number of results is 50.
- If used with no optional inputs, it will return the latest 50 transactions with the latest one being first sorted by time.
- If you include your Pass Phrase in the request, you do not need to submit your Web Password.

Table 12-1: GetTransactionsListing XML Elements (XMLInput Parameter)

- 6 17 64 Y or N Prints Purchases	The root node for the XML request. Account ID for the Endicia postage account. Customer's Web Password. Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element. Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element. Is this a test request? Returns print transactions only (default) Returns purchase transactions only Returns both print and purchase
17 64 Y or N Prints	account. Customer's Web Password. Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element. Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element. Is this a test request? Returns print transactions only (default) Returns purchase transactions only
64 Y or N Prints	Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element. Is this a test request? Returns print transactions only (default) Returns purchase transactions only
Y or N Prints	the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element. Is this a test request? Returns print transactions only (default) Returns purchase transactions only
Y or N Prints	Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element. Is this a test request? Returns print transactions only (default) Returns purchase transactions only
Prints	the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element. Is this a test request? Returns print transactions only (default) Returns purchase transactions only
Prints	Returns print transactions only (default) Returns purchase transactions only
	(default) Returns purchase transactions only
	(default) Returns purchase transactions only
Purchases	,
	Returns both print and purchase
AII	transactions
AII	Includes CostCenter in response.
xxxx	Returns transactions with specified CostCenter, and includes CostCenter in response
Y or N	Do you want the from address information returned?
Mm/dd/yyyy	Start Date of the Query
Hh·mm·ss	Start Time of the Query

Element	Туре	Size or Values	Description
EndDate	Date	Mm/dd/yyyy	End Date of the Query
EndTime	Time	Hh:mm:ss	End Time of the Query
ToZipCode	ZipCode	XXXXX	Destination ZIP Code To Search For
Results	Int	1 – 50	Maximum Results Returned (If more than 50 is used, it will default to 50)
TrackingList	Node	-	Container Node For the Tracking List
PICNumber	Numeric	30	Package PIC Number (Tracking Number)
CustomsID	Text	25	Package Customs ID (GPM and GAPP tracked shipments only)
PieceID	Numeric	10	Package Piece ID

The following listing shows a syntax example of the StatusRequest XML for the Refund Request API.

Listing 12-1: GetTransactionsListing XML

```
<?xml version="1.0" encoding="utf-8"?>
<TransactionsListingRequest>
       <AccountID></AccountID>
       <WebPassword></WebPassword>
       <Test></Test>
       <TransactionType></TransactionType>
       <StartDate></StartDate>
       <StartTime></StartTime>
       <EndDate></EndDate>
       <EndTime></EndTime>
       <Results></Results>
       <ToZipCode></ToZipCode>
       <FromAddress></FromAddress>
       <TrackingList>
               <PICNumber></PICNumber>
               <PieceID></PieceID>
               <CustomsID></CustomsID>
       </TrackingList>
</TransactionsListingsRequest>
```

TransactionsListingResponse XML Syntax

The following table describes the XML tags for TransactionsListingResponse.

Table 12-2: GetTransactionsListing Response XML Elements

Element	Туре	Size or Values	Description	
TransactionsListingResponse	Root	-	The root node for the XML response.	
TransactionType	Text		Transaction Type – Print or Purchase	
AccountID	Numeric	6	Account ID for the Endicia postage account.	
ErrorMsg	Text	-	Account Login Error Message	
Test	Text	Y or N	Is this a test request?	
TransactionResults	Node	-	Container Node For the Transaction List	
Transaction	Node	-	Container Node For the Transaction	
PieceID	Numeric		Piece Number of the Shipment	
Amount	Numeric		Value of the Postage	
Weight	Text		Weight of the Shipment	
TransactionDateTime	DateTime	Mm/dd/yyyy hh:mm:ss	Date and Time the Shipment was Created	

Element	Туре	Size or Values	Description
PostmarkDate	Date	Mm/dd/yyyy	Date of the Postmark on the Shipment
MailClass	Text		List of the Shipment Definition Delimited By ';' (For example: "First-Class; Delivery Confirmation")
CustomsID	Text		Customs ID of the Shipment
PICNumber	Text		Tracking Number of the Shipment
ToName	Text		Name of the Person Receiving the Shipment
ToCompany	Text		Company Name of the Receiving Party
ToAddress	Text		Address of the Receiving Party
ToCity	Text		City of the Receiving Party
ToState	Text		State of the Receiving Party
ToZipCode	Text	XXXXX-XXXX	ZIP Code of the Receiving Party
ToPhone	Text	XXXXXXXXX	Phone Number of the Receiving Party
ToEmail	Text		e-mail Address of the Receiving Party
ToCountry	Text		Country of the Receiving Party
FromName	Text		Name of the Person Sending the Shipment. Shown if FromAddress is Y.
FromCompany	Text		Company Name of the Sending Party. Shown if FromAddress is Y.
FromAddress	Text		Address of the Sending Party. Shown if FromAddress is Y.
FromCity	Text		City of the Sending Party. Shown if FromAddress is Y.
FromState	Text		State of the Sending Party. Shown if FromAddress is Y.
FromZipCode	Text	XXXXX-XXXX	ZIP Code of the Sending Party. Shown if FromAddress is Y.
FromPhone	Text	XXXXXXXXX	Phone Number of the Sending Party. Shown if FromAddress is Y.
FromEmail	Text		E-mail Address of the Sending Party. Shown if FromAddress is Y.
DeliveryDateTime	DateTime	Mm/dd/yyyy hh:mm:ss	Date and Time of the Delivery

l	Element	Туре	Size or Values	Description
St	atusCode	Text		USPS Status Code of the Shipment
St	atus	Text		USPS Status of the Shipment
Re	efundCode	Char	1	Refund Code of the Shipment
Re	efundStatus	Text		Refund Definition of the Shipment

The following listing shows an example of the GetTransactionsListing Response XML.

Listing 12-2: GetTransactionsListing Response XML

```
<?xml version="1.0" encoding="UTF-8"?>
<TransactionsListingResponse>
       <AccountID></AccountID>
       <ErrorMsq></ErrorMsq>
       <Test></Test>
        <TransactionResults>
               <Transaction>
                  <TransactionType></TransactionType>
                  <PieceID></PieceID>
                  <Amount></Amount>
                  <Weight></Weight>
                  <TransactionDateTime></TransactionDateTime>
                  <PostmarkDate></PostmarkDate>
                  <MailClass></MailClass>
                  <CustomsID></CustomsID>
                  <PICNumber></PICNumber>
                  <ToName></ToName>
                  <ToCompany></ToCompany>
                  <ToAddress></ToAddress>
                  <ToCity></ToCity>
                  <ToState></ToState>
                  <ToZipCode></ToZipCode>
                  <ToPhone></ToPhone>
                  <ToEmail></ToEmail>
                  <ToCountry></ToCountry>
                  <FromCompany</pre>/FromCompany>
                  <FromName></FromName>
                  <FromAddress></FromAddress>
                  <FromCity></FromCity>
                  <FromState></FromState>
                  <FromZipCode></fromZipCode>
                  <FromPhone></FromPhone>
                  <FromEmail></fromEmail>
                  <DeliveryDateTime></DeliveryDateTime>
                  <StatusCode></StatusCode>
                  <Status></Status>
                  <RefundCode></RefundCode>
                  <RefundStatus></RefundStatus>
               </Transaction>
        </TransactionResults>
</TransactionsListingResponse>
```

GetTransactionsListing Response Error Codes

Error Code String	Error Message	
II odin Falled	Given in the root node, occurs if the account number or password is incorrect.	
ERROR 104: Please limit requests to seven days	Please limit requests to seven days	

GetTransactionsListing Response Definitions

Note: These are not exact definitions.

Error Code String	Error Message	
-1	Not Found	
0	Found–No Status	
Α	Logged at USPS	
I	Scanned in Route	
D	Delivered	
L	Notice Left for Recipient	
F	Forwarded to New Address	
R	Returned to Sender	
U	Undeliverable	
N	New Item	
X	Other	

GetTransactionsListing Refund Code and Refund Status

Refund Code	Refund Status
X	Refund Submitted
Υ	Refund Validated
R	Refund Rejected
A,C, S, U	Refunded
M	Manual Refund

13. USING THE SCAN FORM API

SCANRequest

If you are developing software for use by multiple customers and thus will be maintaining multiple accounts, this chapter demonstrates an automated Web Service that allows your customers to use the SCAN Service. You can collect all the needed information and just submit it through this API. In return, you will get an acknowledgement message back.

Important! The URL for this service is <u>distinct and different</u> than the Endicia Label Server Web Service URL. You will receive this unique URL for this API with the "Welcome" e-mail message.

SCANRequest XML Syntax

The following table describes the XML tags for SCANRequest

Important notes about all elements:

Omitting any value will cause the SCAN Request Web Service to use the default value for that element.

- *Italic* items are optional.
- The PickupList Node can have many Sub Nodes to do a list of shipments that need to be added to the form.
- As a rule a tracking number is the PICNumber for a shipment. The technical term will always be PICNumber, but it is commonly referred to as a tracking number.
- You do not need PICNumber, CustomsID, and PieceID, only one of them. They are all in the API to give a choice as to which to use.
- You may submit as many shipments as you want per request.
- If you include your Pass Phrase in the request, you do not need to submit your Web Password.

Table 13-1: SCANRequest XML Elements

Element	Туре	Size or Values	Description
SCANRequest	Root	-	The root node for the XML request.
AccountID	Numeric	6	Account ID for the Endicia postage account.
WebPassword	Text	17	Customer's Web Password. Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element.
PassPhrase	Text	64	Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element.

Element	Туре	Size or Values	Description
Test	Text	Y or N	Is this a test transaction?
FromName	Text	50	Name On the form (defaults to the name on the account)
FromAddress	Text	100	Address on the form (defaults to the address on the account)
FromCity	Text	50	City on the form (defaults to the city on the account)
FromState	Text	2	State abbreviation on the form (defaults to the state on the account)
FromZipCode	Text	5 or 10 digits xxxxx or xxxxx-xxxx	ZIP Code on the form (defaults to the zip code on the form)
SubmissionID	Text		Submission ID of the form (for re- printing a previously created form)
ImageFormat	Text	PDF, GIF, PNG, or JPG	Format of the image returned in base64 format (GIF is default).
CostCenter	Numeric		Can be used instead of SCANList to auto-add all pieces with that grouping code.
DPI	Numeric	96, 150, or 300	Defaults to 96, but can be 96,150, or 300.
SCANList	Node	-	Container Node For the SCAN List
PICNumber	Numeric	30	Package PIC Number (Tracking Number)
CustomsID	Text	25	Package Customs ID (GPM and GAPP tracked shipments only)

Element	Туре	Size or Values	Description
PieceID	Numeric	10	Package Piece ID

The following listing shows a syntax example of the SCANRequest XML for the SCAN Request API.

Listing 13-1: SCANRequest XML

SCANResponse XML Syntax

The following table describes the XML tags for SCANResponse.

Table 13-2: SCANResponse XML Elements (XMLInput Parameter)

Element	Туре	Size or Values	Description
SCANResponse	Root	-	The root node for the XML response.
AccountID	Numeric	6	Account ID for the Endicia postage account.
ErrorMsg	Text	-	Account Login Error Message
Test	Text	Y or N	Is this a test transaction?
SubmissionID	Numeric		Submission ID of the SCAN Form
ImageFormat	Text	GIF, PNG, or JPG	Image format of the SCAN Form
SCANForm	Base64 encoded image		SCANForm Image

The following listing shows an example of the SCANResponse XML.

Listing 13-2: SCANResponse XML

Using form submission: To use this API with a form submission you must declare both the method and the XML's parameter name in the submission.

Example:

```
<form name="SCANRequest"
    method="POST"
    action="URL TO API&method=SCANRequest">
        <input type="hidden" name="XMLInput" value="XML (Formatted as above)">
</form>
```

OR (through cURL in PHP):

```
$xml = XML (Formatted as above);
$curl_handle = curl_init ();

curl_setopt ($curl_handle, CURLOPT_URL, 'URL TO API');
curl_setopt ($curl_handle, CURLOPT_FOLLOWLOCATION, 1);
curl_setopt ($curl_handle, CURLOPT_RETURNTRANSFER, 1);
curl_setopt ($curl_handle, CURLOPT_SSL_VERIFYPEER, 0);
curl_setopt ($curl_handle, CURLOPT_POST, 1);
curl_setopt ($curl_handle, CURLOPT_POSTFIELDS,
  '&method=SCANRequest&XMLInput=' . $xml);
$curl_result = curl_exec ($curl_handle) or die ("There has been a CURL_EXEC error");
curl_close ($curl_handle);
echo $curl_result;
```

Example using SOAP submission (with PHP)

SCANRequest Error Codes

Error Code String	Error Message
Login Failed	Given in the root node, occurs if the account number or password is incorrect.
XMLInput Error	XML is not formatted correctly.
Error 102: No shipments added to SCAN. Please check tracking numbers.	Either the shipments have already been added to another form, or they do not qualify for SCAN.
Error 105: SCAN Form Not Found	If the SCAN form cannot be found for that account.

14. REQUESTING A CARRIER PICKUP API'S

If you are developing software for use by multiple customers and thus will be maintaining multiple accounts, this chapter demonstrates an automated Web Service that will allow your customers to submit carrier pickup requests more efficiently. You can collect all the needed information and just submit it through this API. In return, you will receive an acknowledgement message.

The Requesting a Carrier Pickup API includes:

- Scheduling a Carrier Pickup API
- Cancelling a Carrier Pickup Request API
- Changing a Carrier Pickup Request API
- Scheduling a Multiple Location Carrier Pickup Request API

Important! The URL for this service is <u>distinct and different</u> than the Endicia Label Server Web Service URL. You will receive this unique URL for this API with the <u>"Welcome" e-mail message</u>.

Important notes about all elements:

- Omitting any value will cause the Web Service to use the default value for that element.
- *Italic* items are optional.
- The PickupList Node, if needed, can have many Sub Nodes to do a list of shipments that need to be added to the carrier pickup.
- As a rule a tracking number is the PICNumber for a shipment. The technical term will always be PICNumber, but it is commonly referred to as a tracking number.
- You do not need both the PICNumber, CustomsID and PieceID, just one of them. They are all in the API to give a choice as to which to use.
- You may submit as many shipments as you want per request.

Important notes about these API's:

- Express Mail International is counted as "Express".
- Priority Mail International is counted as "Priority".
- At least one Express or Priority mail shipment must be included in the pickup.
- A pickup for the next day must be scheduled prior to 2AM EST the day of the pickup.
- A pickup for the next day can be changed and cancelled prior to 2AM EST the day of the pickup.
- You must have the same address information and confirmation number to change or cancel a pickup.
- You need special permission to use the Multiple Location Carrier Pickup API. You must contact us to become approved.
- Locations for the Multiple Location Carrier Pickup API are grouped by the Cost Center tag. (LabelRequest XML)
- Address information for the Multiple Location Carrier Pickup defaults to first shipment found in that Cost Center
- If you include your Pass Phrase in the request, you do not need to submit your Web Password.

14a. SCHEDULING A CARRIER PICKUP API

CarrierPickupRequest

Table 14a-1: Carrier Pickup Request API

Element	Туре	Size or Values	Description
CarrierPickupRequest	Root	-	The root node for the XML request.
AccountID	Numeric	6	Account ID for the Endicia postage account.
WebPassword	Text	17	Customer's Web Password. Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element.
PassPhrase	Text	64	Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element.
Test	Text	Y or N	Is this a test transaction?
UseAddressOnFile	Text	Y or N	Use your physical address we have on file (Default Y)
FirstName	Text	100	First name on the pickup (defaults to the first name on the account)
LastName	Text	100	Last name on the pickup (defaults to the last name on the account)
CompanyName	Text	100	Company name on the pickup (defaults to the company name on the account)
SuiteOrApt	Text	25	Suite or apartment number on the pickup (defaults to the one on file)

Element	Туре	Size or Values	Description
Address	Text	100	Address of the pickup (defaults to the one on file)
City	Text	100	City of the pickup (defaults to the one on file)
State	Text	2	State abbreviation of the pickup (defaults to the one on file)
ZIP5	Numeric	5	Five digit zip code of the pickup (defaults to the one on file)
ZIP4	Numeric	4	+4 zip code for the pickup (defaults to the one on file)
Phone	Numeric	10	Phone number of the pickup (defaults to the one on file)
Extension	Numeric	5	Phone number extension for the pickup (defaults to the one on file)
PackageLocation	Char	2	sd - Side Door kd - Knock on Door/Ring Bell mr - Mail Room of - Office rc - Reception im - In/At Mailbox ot - Other fd - Front Door bd - Back Door
SpecialInstructions	Text	100	Required if "ot" chosen for PackageLocation. Special Instructions for pickup.
PickupList	Node		Shipments to be picked up. They can be referred to by PIC, Customs ID, or Piece ID. You only need one reference per shipment.
PICNumber	Numeric	30	Package PIC Number (Tracking Number)

Element	Туре	Size or Values	Description
CustomsID	Text	25	Package Customs ID (GPM and GAPP tracked shipments only)
PieceID	Numeric	10	Package Piece ID

The following listing shows an example of the CarrierPickupRequest XML for the Carrier Pickup Request API.

Listing 14a-1: CarrierPickupRequest XML

CarrierPickupResponse XML Syntax

The following table describes the XML tags for CarrierPickupResponse.

Table 14a-2: CarrierPickupResponse XML Elements (XMLInput Parameter)

Element	Туре	Size or Values	Description
CarrierPickupRequestResponse	Root	-	The root node for the XML response.
AccountID	Numeric	6	Account ID for the Endicia postage account.
ErrorMsg	Text	-	Error Message
Test	Text	Y or N	Is this a test transaction?
Response	Container Node		Container Node for the Response
Error	Container Node		Container Node For the Error (will only show IF there is an error)
Number	Numeric		USPS Error Code
Description	Text	250	USPS Error Code Description
DayOfWeek	Text	Pickup Day of week (i.e. "Monday")	Pickup day of week
Date	Date	Xx/xx/xxxx	Date of pickup
CarrierRoute	Char	1	Pickup Route type (i.e. "C" for City)

Element	Туре	Size or Values	Description
ConfirmationNumber	Text		Confirmation number of the pickup (Needed to change or cancel pickup)

The following listing shows an example of the CarrierPickupResponse XML.

Listing 14a-2: CarrierPickupResponse XML

Using form submission: To use this API with a form submission you must declare both the method and the XML's parameter name in the submission.

Example:

```
<form name="CarrierPickupRequest"
    method="POST"
    action="URL TO API&method=CarrierPickupRequest">
        <input type="hidden" name="XMLInput" value="XML (Formatted as above)">
</form>
```

OR (through cURL in PHP):

Example using SOAP submission (with PHP)

CarrierPickupRequest Error Codes

Error Code String	Error Message	
Login Failed	Given in the root node, occurs if the account number or password is incorrect.	
XMLInput Error	XML is not formatted correctly.	
You need at least 1 Express or Priority package	You need at least one Priority or Express mail shipment.	
Invalid Package Location	You must use: sd - Side Door kd - Knock on Door/Ring Bell mr - Mail Room of - Office rc - Reception im - In/At Mailbox ot - Other fd - Front Door bd - Back Door	
USPS Error Codes	No complete list is available.	

14B. CANCELING A CARRIER PICKUP REQUEST API

CarrierPickupCancel

Table 14b-1: CarrierPickupCancel XML Elements

Element	Туре	Size or Values	Description
nrierPickupCancel	Root	-	The root node for the XML request.
AccountID	Numeric	6	Account ID for the Endicia postage account.
WebPassword	Text	17	Customer's Web Password. Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element
PassPhrase	Text	64	Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element.
Test	Text	Y or N	Is this a test transaction?
UseAddressOnFile	Text	Y or N	Use your physical address we have on file (Default Y)
CompanyName	Text	100	Company name on the pickup (defaults to the company name on the account)
SuiteOrApt	Text	25	Suite or apartment number on the pickup (defaults to the one on file)
Address	Text	100	Address of the pickup (defaults to the one on file)
City	Text	100	City of the pickup (defaults to the one on file)

Element	Туре	Size or Values	Description
State	Text	2	State abbreviation of the pickup (defaults to the one on file)
ZIP5	Numeric	5	Five digit zip code of the pickup (defaults to the one on file)
ZIP4	Numeric	4	+4 zip code for the pickup (defaults to the one on file)
ConfirmationNumber	Text	100	Confirmation number for the pickup

The following listing shows a syntax example of the CarrierPickupCancel XML for the Carrier Pickup Cancel API.

Listing 14b-1: CarrierPickupCancel XML

CarrierPickupCancelResponse XML Syntax

The following table describes the XML tags for CarrierPickupCancelResponse.

Table 14b-2: CarrierPickupCancelResponse XML Elements (XMLInput Parameter)

Element	Туре	Size or Values	Description
CarrierPickupCancelResponse	Root	-	The root node for the XML response.
AccountID	Numeric	6	Account ID for the Endicia postage account.
ErrorMsg	Text	-	Error Message
Test	Text	Y or N	Is this a test transaction?
Response	Container Node		Container Node for the Response
Error	Container Node		Container Node For the Error (will only show IF there is an error)
Number	Numeric		USPS Error Code

Element	Туре	Size or Values	Description
Description	Text	250	USPS Error Code Description
ConfirmationNumber	Text		Confirmation Number of the Pickup (Needed to change or cancel pickup)
Status	Text	250	Status of the pickup (i.e. "Cancelled")

The following listing shows an example of the CarrierPickupCancelResponse XML.

Listing 14b-2: CarrierPickupCancelResponse XML

Using form submission: To use this API with a form submission you must declare both the method and the XML's parameter name in the submission.

Example:

```
<form name="CarrierPickupCancel"
    method="POST"
    action="URL TO API&method=CarrierPickupCancel">
        <input type="hidden" name="XMLInput" value="XML (Formatted as above)">
</form>
```

OR (through cURL in PHP):

Example using SOAP submission (with PHP)

CarrierPickupCancel Error Codes

Error Code String	Error Message
II Odin Falled	Given in the root node, occurs if the account number or password is incorrect.
XMLInput Error	XML is not formatted correctly.
USPS Error Codes	No complete list available.

14c. Changing a Carrier Pickup Request API

CarrierPickupChange

Table 14c-1: CarrierPickupChange XML Elements

Element	Туре	Size or Values	Description
CarrierPickupChange	Root	-	The root node for the XML request.
AccountID	Numeric	6	Account ID for the Endicia postage account.
WebPassword	Text	17	Customer's Web Password. Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element.
PassPhrase	Text	64	Customer's Pass Phrase Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element.
Test	Text	Y or N	Is this a test transaction?
UseAddressOnFile	Text	Y or N	Use your physical address we have on file (Default Y)
FirstName	Text	100	First name on the pickup (defaults to the first name on the account)
LastName	Text	100	Last name on the pickup (defaults to the last name on the account)
CompanyName	Text	100	Company name on the pickup (defaults to the company name on the account)
SuiteOrApt	Text	25	Suite or apartment number on the pickup (defaults to the one on file)

Element	Туре	Size or Values	Description
Address	Text	100	Address of the pickup (defaults to the one on file)
City	Text	100	City of the pickup (defaults to the one on file)
State	Text	2	State abbreviation of the pickup (defaults to the one on file)
ZIP5	Numeric	5	Five digit zip code of the pickup (defaults to the one on file)
ZIP4	Numeric	4	+4 zip code for the pickup (defaults to the one on file)
Phone	Numeric	10	Phone number of the pickup (defaults to the one on file)
Extension	Numeric	5	Phone number extension for the pickup (defaults to the one on file)
PackageLocation	Char	2	sd - Side Door kd - Knock on Door/Ring Bell mr - Mail Room of - Office rc - Reception im - In/At Mailbox ot - Other fd - Front Door bd - Back Door
SpecialInstructions	Text	100	Required if "ot" is chosen for PackageLocation. Special Instructions for pickup.
ConfirmationNumber	Text	100	The confirmation number of the pickup you are changing
PickupList	Node	-	Container node for the Carrier Pickup List

Element	Туре	Size or Values	Description
PICNumber	Numeric	30	Package PIC Number (Tracking Number)
CustomsID	Text	25	Package Customs ID (GPM and GAPP tracked shipments only)
PieceID	Numeric	10	Package Piece ID

The following listing shows an example of the CarrierPickupChange XML for the Carrier Pickup Change API.

Listing 14c-1: CarrierPickupChange XML

CarrierPickupChangeResponse XML Syntax

The following table describes the XML tags for CarrierPickupChangeResponse.

Table 14c-2: CarrierPickupChangeResponse XML Elements (XMLInput Parameter)

Element	Туре	Size or Values	Description
CarrierPickupChangeResponse	Root	-	The root node for the XML response.
AccountID	Numeric	6	Account ID for the Endicia postage account.
ErrorMsg	Text	-	Error Message
Test	Text	Y or N	Is this a test transaction?
Response	Container Node		Container Node for the Response
Error	Container Node		Container Node For the Error (will only show IF there is an error)
Number	Numeric		USPS Error Code
Description	Text	250	USPS Error Code Description

Element	Туре	Size or Values	Description
DayOfWeek	Text	Pickup Day of week (i.e. "Monday")	Pickup day of week
Date	Date	Xx/xx/xxxx	Date of pickup
CarrierRoute	Char	1	Pickup Route type (i.e. "C" for City)
ConfirmationNumber	Text	100	Confirmation number of the pickup (Needed to change or cancel pickup)

The following listing shows an example of the CarrierPickupChangeResponse XML.

Listing 14c-2: CarrierPickupChangeResponse XML

Using form submission: To use this API with a form submission you must declare both the method and the XML's parameter name in the submission.

Example:

```
<form name="CarrierPickupChange"
    method="POST"
    action="URL TO API&method=CarrierPickupChange">
        <input type="hidden" name="XMLInput" value="XML (Formatted as above)">
</form>
```

OR (through cURL in PHP):

```
$xml = XML (Formatted as above);
$curl_handle = curl_init ();

curl_setopt ($curl_handle, CURLOPT_URL, 'URL TO API');
curl_setopt ($curl_handle, CURLOPT_FOLLOWLOCATION, 1);
curl_setopt ($curl_handle, CURLOPT_RETURNTRANSFER, 1);
curl_setopt ($curl_handle, CURLOPT_SSL_VERIFYPEER, 0);
curl_setopt ($curl_handle, CURLOPT_POST, 1);
curl_setopt ($curl_handle, CURLOPT_POSTFIELDS,
'&method=CarrierPickupChange&XMLInput=' . $xml);
$curl_result = curl_exec ($curl_handle) or die ("There has been a CURL_EXEC error");
curl_close ($curl_handle);
```

```
echo $curl result;
```

Example using SOAP submission (with PHP)

CarrierPickupChange Error Codes

Error Code String	Error Message	
Login Failed	Given in the root node, occurs if the account number opassword is incorrect.	
XMLInput Error	XML is not formatted correctly.	
You need at least 1 Express or Priority package	You need at least one Priority or Express mail shipment.	
Invalid Package Location	You must use: sd - Side Door kd - Knock on Door/Ring Bell mr - Mail Room of - Office rc - Reception im - In/At Mailbox ot - Other fd - Front Door bd - Back Door	
USPS Error Codes	No complete list available.	

14D. SCHEDULING A MULTIPLE LOCATION CARRIER PICKUP REQUEST API

MultiLocationCarrierPickup

Table 14d-1: MultiLocationCarrierPickup XML Elements

Element	Туре	Size or Values	Description
MultiLocationCarrierPickup	Root	-	The root node for the XML request.
AccountID	Numeric		Account ID for the Endicia postage account.
WebPassword	Text	17	Customer's Web Password.
			Important! You must use either the WebPassword or the PassPhrase element. The WebPassword element is optional if you use the PassPhrase element.
PassPhrase	Text	64	Customer's Pass Phrase
			Important! You must use either the PassPhrase or the WebPassword element. The PassPhrase element is optional if you use the WebPassword element.
Test	Text	Y or N	Is this a test transaction?

The following listing shows a syntax example of the CarrierPickupRequest XML for the Carrier Pickup Request API.

Listing 14d-1: MultiLocationCarrierPickup XML

MultiLocationCarrierPickupResponse XML Syntax

The following table describes the XML tags for CarrierPickupResponse.

Table 14d-2: MultiLocationCarrierPickupResponse XML Elements (XMLInput Parameter)

Element	Туре	Size or Values	Description
MultiLocationCarrierPickupResponse	Root	-	The root node for the XML
			response.

Element	Туре	Size or Values	Description

City	Text		City of missed pickup
State	Char	2	State code of missed pickup
ZipCode	Numeric		ZIP Code of missed pickup
PhoneNumber	Text		Phone Number of missed pickup
EmailAddress	Text		E-mail address of missed pickup
ConfirmationNumber	Text	100	Confirmation number of missed pickup

Element	Туре	Size or Values	Description
Message	Text		Reason why it was not scheduled

The following listing shows an example of the MultiLocationCarrierPickupResponse XML.

Listing 14d-2: MultiLocationCarrierPickupResponse XML

```
<?xml version="1.0" encoding="UTF-8"?>
<MultiLocationCarrierPickupResponse>
       <AccountID></AccountID>
       <ErrorMsq></ErrorMsq>
       <Test></Test>
       <ScheduledPickups>
               <GroupID>
                       <Name></Name>
                       <CompanyName></CompanyName>
                       <Address></Address>
                       <City></City>
                       <State></State>
                       <ZipCode></ZipCode>
                       <PhoneNumber></PhoneNumber>
                       <EmailAddress></EmailAddress>
                       <ConfirmationNumber></ConfirmationNumber>
                       <Message></Message>
               </GroupID>
       </ScheduledPickups>
       <NotScheduled>
               <GroupID>
                       <Name></Name>
                       <CompanyName></CompanyName>
                       <Address></Address>
                       <City></City>
                       <State></State>
                       <ZipCode></ZipCode>
                       <PhoneNumber></PhoneNumber>
                       <EmailAddress></EmailAddress>
                       <ConfirmationNumber></ConfirmationNumber>
                       <Message></Message>
               </GroupID>
       </NotScheduled>
</MultiLocationCarrierPickupResponse>
```

Using form submission: To use this API with a form submission you must declare both the method and the XML's parameter name in the submission.

Example:

OR (through cURL in PHP):

```
$xml = XML (Formatted as above);
$curl_handle = curl_init ();

curl_setopt ($curl_handle, CURLOPT_URL, 'URL TO API');
curl_setopt ($curl_handle, CURLOPT_FOLLOWLOCATION, 1);
curl_setopt ($curl_handle, CURLOPT_RETURNTRANSFER, 1);
curl_setopt ($curl_handle, CURLOPT_SSL_VERIFYPEER, 0);
curl_setopt ($curl_handle, CURLOPT_POST, 1);
curl_setopt ($curl_handle, CURLOPT_POSTFIELDS,
    '&method=MultiLocationCarrierPickup&XMLInput=' . $xml);
$curl_result = curl_exec ($curl_handle) or die ("There has been a CURL_EXEC error");
curl_close ($curl_handle);
echo $curl_result;
```

Example using SOAP submission (with PHP)

CarrierPickupRequest Error Codes

Error Code String	Error Message
Login Failed	Given in the root node, occurs if the account number or password is incorrect.
XMLInput Error	XML is not formatted correctly.
Too Few Priority or Express	You need at least one Priority or Express mail shipment.
USPS Error Codes (Message Node)	No complete list available.

15. ADDRESS VALIDATION—DIAL-A-ZIP

The Endicia Label Server Web Service requires a valid destination address in the LabelRequest XML to process a shipping label. To ensure that your address is in the format that the USPS requires, refer to USPS Publication 28, Postal Addressing Standards, which you can download from:

http://pe.usps.com/cpim/ftp/pubs/Pub28/pub28.pdf

If an address has been rejected, see the error message in the LabelRequestResponse XML to correct the address being submitted.

Note: The Endicia Label Server calls the Dial-A-ZIP servers to validate addresses. If you want to "advance validate" or process addresses that are *not* bound for the Endicia Label Server, contact us for a Dial-A-ZIP address validation API.

The Endicia Label Server Web Service returns a label if the destination address:

- is an exact match.
- has a valid city, state, and ZIP Code, but the street address is not a match.
- is a default match in the Dial-A-ZIP address database.

The Endicia Label Server Web Service will *not* return a label if the destination address:

- is invalid.
- has an invalid city, state, or ZIP Code.
- is not found.
- has multiple matches, or is too ambiguous to resolve to a default address.

16. PRINTING USING EPL2 AND ZPLII

For certain label layouts, the Label Server Web Service can generate label images in Zebra's native printer languages, EPL2 and ZPLII. The label image can contain data in both text and binary. To ensure that the USPS can successfully scan the barcodes in the label, care must be taken to preserve the raw printer data when sending the label image to the Zebra printer.

Some guidelines to follow when printing EPL2 and ZPLII labels to Zebra printers include:

• Verify that your Zebra printer has the appropriate DataMatrix firmware installed

The Label Server uses the DataMatrix symbology. If the Zebra printer does not contain the appropriate firmware, the square DataMatrix postage barcode would not print on the label and the USPS will reject the mailpiece. The following is an EPL2 label with the DataMatrix barcode in the upper-right corner:

To upgrade the printer's firmware to support DataMatrix barcodes, visit the Zebra support Web site:

http://www.zebra.com/id/zebra/na/en/index/drivers_downloads/firmware/firmware_for_printers.html

• Treat all data contained in the EPL2 or ZPLII label image as binary bytes

The label image contains text and binary data values. All data must be treated as binary. Therefore, whether sending the label image data directly to the printer or saving it to intermediate storage for later retrieval, there should be no conversion performed to ANSI, ASCII or any other format. If that happens, the crucial barcode data bits will be changed causing the USPS scanners to read erroneous barcode data.

The following example in Visual C# shows how to send raw data to a printer:

```
public static bool SendBytesToPrinter(string szPrinterName, byte[] bytes)
  Int32
          nLength;
  IntPtr pUnmanagedBytes;
bool bSuccess:
  bool
           bSuccess;
  pUnmanagedBytes = new IntPtr(0);
  nLength = Convert.ToInt32(bytes.Length);
  pUnmanagedBytes = Marshal.AllocCoTaskMem(nLength);
  Marshal.Copy(bytes, 0, pUnmanagedBytes, nLength);
  bSuccess = SendBytesToPrinter(szPrinterName, pUnmanagedBytes, nLength);
  Marshal.FreeCoTaskMem(pUnmanagedBytes);
  return (bSuccess);
public static bool SendBytesToPrinter(string szPrinterName,
                                       IntPtr pUnmanagedBytes, Int32 nLength)
  DOCINFOA di;
  Int32 dwError, dwWritten;
  IntPtr hPrinter;
  bool
         bSuccess;
  bSuccess = false;
  dwError = 0;
  dwWritten = 0;
  di = new DOCINFOA();
  di.pDocName = "ELS Label";
  di.pDataType = "RAW";
  hPrinter = new IntPtr(0);
  if (OpenPrinter(szPrinterName.Normalize(), out hPrinter, IntPtr.Zero) == true)
     if (StartDocPrinter(hPrinter, 1, di) == true)
        if (StartPagePrinter(hPrinter))
        {
           bSuccess = WritePrinter(hPrinter, pUnmanagedBytes, nLength,
                                    out dwWritten);
           EndPagePrinter(hPrinter);
        EndDocPrinter(hPrinter);
     ClosePrinter(hPrinter);
  }
```

```
if (bSuccess == false)
{
   dwError = Marshal.GetLastWin32Error();
}
return(bSuccess);
```

• Correctly decode the sequence of data bytes in the label image

The Zebra EPL2 and ZPLII languages have special sequences of bytes to represent special characters, such as a quote, back slash, and so on. These special sequences must be recognized and decoded properly to obtain a scannable label. Refer to the Zebra programming guides for further information.

17. MISCELLANEOUS NOTES AND FEATURES

Topics in this section include:

- Bulk Acceptance Scans (SCAN)
- Automated Carrier Pickup
- Endicia Printable Postage XML
- APO/FPO Addresses
- Proxy Server
- Accessing the Endicia Label Server Web Service through SSL/HTTPS
- Eligible Matter for Delivery or Signature Confirmation
- Express Mail Sunday and Holiday Service
- Rubber Stamps

Bulk Acceptance Scans (SCAN)

SCAN feature is available with each Endicia Label Server account through Endicia.com. This feature links all daily shipments with either Delivery or Signature Confirmation to a single bar-coded form that the USPS scans when packages are picked up. When this scan data is uploaded into the postal system that night, all your packages will be marked accepted on the USPS tracking system.

When your customer verifies the status of their package instead of reading that the USPS was electronically notified of the item, your customer will see "The USPS accepted this item at Date and Time".

http://www.endicia.com/Features/BulkAcceptanceScans/

Automated Carrier Pickup

Endicia has automated USPS "Carrier Pickup". This feature can be used to schedule next day pickup by the Postal Service for packages created by the Endicia Label Server (Express Mail, Priority Mail and International shipments). More information is available upon request.

Endicia Printable Postage XML

The *Endicia Printable Postage* solution is available with your Endicia Label Server accounts. Endicia Printable Postage can print stamps without entering any address information. While Endicia Printable Postage is a client based program, Endicia has an XML interface for Endicia Printable Postage rolls, which can be printed through DYMO printers. This interface can be used in conjunction with Endicia Label Server to address various light weight mail needs. More information is available upon request. http://www.endicia.com/Features/InstaPostage/

APO/FPO Addresses

Currently, the USPS does not allow Signature Confirmation to be used for APO/FPO addresses. Delivery Confirmation is to restricted APO/FPO destinations.

Proxy Server

If the Endicia Label Server Web Service is being called from behind a proxy server that enforces limits on SOAP packet size, you may experience issues with sending and receiving large SOAP packets. For example, a call to the Endicia Label Server Web Service to render a label with a high resolution results in a large SOAP packet being sent. You may need to bypass the proxy, set the SOAP packet size limit very high, or limit the amount of data you are requesting.

Accessing the Endicia Label Server Web Service through SSL/HTTPS

Because the Endicia Label Server Web Service resides on an SSL-enabled server, it will present a digital certificate to the client for authentication. The client must *explicitly* trust the certificate in order for the connection to be set up. If on the other hand, the client chooses not to trust the certificate, the connection will fail.

For further discussion and resolution of this issue, including a suggested workaround in.Net, see Article #823177 on Microsoft's support Web site at:

http://support.microsoft.com/default.aspx?scid=kb;en-us;823177

Eligible Matter for Delivery or Signature Confirmation

Delivery or Signature Confirmation is available for First-Class Mail parcels, Package Services parcels and for all Priority Mail pieces. For further details, consult the USPS Domestic Mail Manual, Section 503 Extra Services (http://pe.usps.gov/text/dmm300/503.htm).

Express Mail Sunday and Holiday Service

On March 3, USPS launched a new Express Mail Sunday and Holiday Delivery service. For an additional fee of \$12.50, your Express Mail mailpiece will be delivered on Sundays and Federal holidays.

Express Mail Sunday and Holiday delivery service is not available to all destinations.

When shipping a mailpiece with the MailClass of ExpressMail and SundayHolidayDelivery set to true, the Endicia Label Server performs the following steps:

- 1. Verify if the next day or second day after the ShipDate is on a Sunday or a Holiday. If it is not, the Endicia Label Server returns error code 11111.
- 2. Retrieve the Express Mail Service Commitments from the USPS servers using the origin and destination ZIP Codes and ShipDate.
 - If no Service Commitments are received for Next Day 12 PM, Next Day 3PM or 2-Day delivery service, the Endicia Label Server returns error code 11112.
 - If Service Commitments are received for two delivery days only, then the Endicia Label Server returns error code 11113.
 - In case of an error communicating with the USPS servers, the Endicia Label Server can return either error code 11102, ExpressMailAPIError, or error code 11110.
- 3. Verify the day when the Service Commitment occurs. If it does not fall on a Sunday or a Holiday, the Endicia Label Server returns error code 11113.
- 4. Finally, cycle through all locations for the Service Commitments to determine if at least one location accepts Express Mail shipments past the supplied ShipTime. If all cut-off times have expired, the Endicia Label Server returns error code 11114. ShipTime is optional; if it is not supplied, it defaults to 12:01 AM, essentially accepting any location in this step.
- 5. For a label or price request, the Endicia Label Server returns the appropriate response with the \$12.50 Sunday-Holiday Delivery premium included in the postage. For a label request, if the

destination ZIP Code does not deliver Express Mail on Sundays or Holidays, the Endicia Label Server returns error code 11115.

Rubber Stamps

A label can contain one or more user-supplied text that are called *Rubber Stamps*. The Endicia Label Server Web Service supports up to three Rubber Stamp fields within a label. Currently, the Rubber Stamp fields are available for the default label type in the following label sizes:

- 4×6
- 4×5
- 4×4.5
- DocTab

Express Mail, international, and integrated labels do not contain Rubber Stamp fields.

Although each Rubber Stamp field can have as many as 50 characters, the actual number of characters that can be printed on the label depends on the content of the Rubber Stamp text. This is true for all labels which are not in EPL2 format because all text is drawn using proportional fonts. Labels in EPL2 format, however, use monospaced fonts. Therefore, the number of characters in the Rubber Stamp fields will be much less than the maximum allowed. For example, a 4×6 default label in EPL2 format can accommodate 26 or fewer characters in each Rubber Stamp field.

The label on the left is a Stealth postage label, which does not show the postage price. The label on the right shows the postage price.

18. FREQUENTLY ASKED QUESTIONS

- Q. What does a customer need to do to move to the production environment?
- A. A customer needs to send:
 - A sample label that the customer has produced from the Test Server. Send the sample label by e-mail to LabelServer@endicia.com.
 - A signed agreement, including Exhibit B. **Note:** The agreement was sent to the customer by e-mail, along with the technical specifications.
- Q. How do I contact technical support?
- A. Support is available by e-mail message through LabelServer@endicia.com. If a phone call is required we can schedule one at that time. **Note**: Include your XML request in any technical support requests when it is available.
- Q. How do I purchase postage in production and what are my postage payment options?
- A. You must purchase postage through the API by using the RecreditRequest method. To review your postage payment options, go to the following URL: http://www.endicia.com/USPSPaymentOptions.cfm
- Q. How do I reset my Pass Phrase in production?
- A. You must reset the Pass Phrase through the API by using the ChangePassPhraseRequest method.

 Note: Make sure your developer adds this feature because after you sign up for a new Endicia
 Label Server account, you will be required to reset the Pass Phrase for security purposes.
- Q. If my account gets suspended due to bad login attempts, how can I reactivate my account?
- A. To reactivate your account, send an e-mail message to support at LabelServer@endicia.com, and then reset the Pass Phrase through the ChangePassPhraseRequest API.
- Q. Do you offer a reprint option?
- A. Reprinting is not available from the Endicia Label Server. You can either store the label image on your side or request a refund on the cancelled label and reprint.
- Q. What are the requirements for submitting a refund for misprints or unused mail pieces?
- A. All labels using Delivery Confirmation, Signature Confirmation, or the Express Mail tracking number must be submitted electronically. No physical submissions are allowed. To qualify, the item cannot be scanned by the USPS and must be requested within 10 days of printing.
- Q. Having problems with printing the barcode on the label using Zebra printer?
- A. If you are using the Zebra LP-2844 printer, you must upgrade the printer's firmware to support DataMatrix barcodes.
- Q. Do you offer customizable notification e-mail options such as DAZzle?
- A. E-mail notifications are only available for Express Mail Services. However, because we return the tracking number, you can easily send out the same exact e-mail notification based on your own business rules.
- Q. What are the options for shipping internationally?
- A. First-Class Mail International, Priority Mail International, and Express Mail International are available for international shipping.

- Q. What can you tell me about shipping to APO/FPO addresses that result in "Address not found"?
- A. APO/FPO addresses are generally problematic. There is no official format that we are aware of. Missing or extra punctuation may cause addresses to be rejected by the address validation engine. For more information, see URL: http://www.penpalsforsoldiers.org/address.html
- Q. Do APO/FPO shipments require customs forms?
- A. According to the USPS, all mail going to an APO/FPO containing merchandise should bear Customs Forms 2976-A. For more information, see: http://webapps.usps.com/customsforms/helppickaform.htm
- Q. When are dimensions required when submitting label requests?
- A. Dimensions are required for Priority Mail items destined for Zones 5-8.
- Q. Can I add my company logo to the shipping label?
- A. We do not offer it as part of the interface, partly because the overhead of sending the additional image back and forth may impact performance. However, we return your image of the label, on which you can superimpose your own logo.
- Q. Do you have a suggested site where we can send customers to view the status of their tracking number?
- A. Here are two links:
 - http://www.endicia.com/Status/?PIC=TRACKINGNUMBERHERE
 - http://trkcnfrm1.smi.usps.com/PTSInternetWeb/InterLabelInquiry.do?origTrackNum=TRAC KINGNUMBERHERE

Note: The second URL has much more current information.

- Q. How do I convert a string containing the label image in Base64 format returned in the LabelRequestResponse XML into a bitmap object in .Net?
- A. The following is a function in C# that converts a string containing the label image in Base64 format returned in the label request response into a bitmap object you can draw on the screen or print:

- Q. Is there a way to ensure that I have a postage account balance so that my account does not ever run out of funds?
- A. The best way to ensure that you do not run out of funds is to write a statement to view the postage account balance that is included with every LabelRequestResponse, and if that postage account balance value is less than a specified dollar amount, subtract that postage account balance value from your postage account limit, and send a RecreditRequest with the amount being the result.

For example, if the postage account value is less than \$100, subtract that value from \$500 and submit the RecreditRequest for the difference.			

19. MAILPIECE SHAPE CHART

The <u>LabelRequest XML</u> contains a MailpieceShape element. The following table shows valid combinations of mailpiece shapes and mail classes, grouped by label type, for use with the MailpieceShape element.

LabelType of Default									
					Mailpiece	e Shape			
	Card	Letter	Flat	Parcel	Flat Rate Box Small , Medium and Large	Flat Rate Envelope, Padded Envelope	Large Parcel ¹	Irregular Parcel	Oversized Parcel ²
Express		✓	\	✓		✓			
First				✓					
Library Mail				✓					
Media Mail				✓					
Parcel Post				✓			✓		✓
Parcel Select				✓			✓		✓
Priority			✓	✓	✓	✓	✓	✓	
Standard Mail				✓				✓	

- 1. Large Parcel is a parcel that weighs less than 20 pounds but measures more than 84 inches in combined length and girth (but not more than 108 inches).
- 2. Oversized Parcel is a parcel that weighs less than 20 pounds but measures more than 108 inches in combined length and girth (but not more than 130 inches).
- 3. The Flat Rate Padded Envelope is only available to qualifying Priority Mail Commercial Plus customers.

LabelType of DestinationConfirm									
	Mailpiece Shape								
	Card	Letter	Flat	Parcel	Flat Rate Box Small , Medium and Large	Flat Rate Envelope, Padded Envelope	Large Parcel	Irregular Parcel	Oversized Parcel
First	✓	✓	1						

LabelType of CertifiedMail									
		Mailpiece Shape							
	Card	Letter	Flat	Parcel	Flat Rate Box Small , Medium and Large	Flat Rate Envelope, Padded Envelope	Large Parcel	Irregular Parcel	Oversized Parcel
First	✓	✓	✓	✓					
Priority	✓	✓	✓	✓					

LabelType of International									
		Mailpiece Shape							
	Card	Letter	Flat	Parcel	Flat Rate Box Small , Medium and Large	Flat Rate Envelope	Large Parcel ¹	Irregular Parcel	Oversized Parcel ²
Express Mail International			✓	✓		✓			
First-Class Mail International		✓	1	✓					
Priority Mail International			✓	✓	✓	✓			

If MailpieceShape is not supplied, it defaults to Parcel with the following exceptions:

- First-Class: DestinationConfirm and CertifiedMail labels default to Letter if WeightOz is 3.5 oz or less; otherwise, it defaults to Flat.
- Priority Mail: CertifiedMail labels defaults to Flat.

Appendix A. Change History

The following table shows the changes to the Endicia Label Server. The most recent changes appear first.

Date	Change
2010-06-18	> Version 5.0
Ver 5.0.3826	 Added Continuation Page to international customs forms to allow up to 30 customs items.
	 Added support for integrated labels with customs forms for international,
	APO/FPO, and other domestic destinations. These labels allow up to 30 customs items.
	 CustomsFormImageResolution (LabelRequest XML)
	Deleted value: 150 (Obsolete)
	CustomsInfo (LabelRequest XML)
	New: To specify the customs declaration.
	 ImageResolution (LabelRequest XML)
	Deleted value: 150 (Obsolete)
	 IntegratedFormType (LabelRequest XML)
	New: To specify the form type to use for an integrated label.
	 LabelSubtype (LabelRequest XML)
	New: To specify a subtype of a label type.
	 LabelType (LabelRequest XML)
	Added new value: Domestic
	 ToCountryCode (LabelRequest XML, PostageRateRequest XML,
	PostageRatesRequest XML)
	New: To specify the country code for an international address.
	Updated description of the following elements in the LabelRequest XML:
	CustomsFormType, CustomsFormImageFormat,
	CustomsFormImageResolution
	OriginCountry, ContentsType, ContentsExplanation, NonDeliveryOption
	CustomsSigner
	ImageFormat
	ReplyPostage, ShowReturnAddress, TrackingNumber
	ReturnAddress3, ReturnAddress4, ToAddress3, ToAddress4
	ToCountry
	Added new error codes:
	1002 ElementNotAllowed
	1050 NoCustomsItems
	1055 ExceedsValueLimitForCustomsForm
	1505 MailClassNotAllowedForLabel
	11303 NoLabelNumberReceived
	11304 InvalidLabelNumberReceived

Date	Change
	Backward compatibility note: Any element or value marked as obsolete in this version will no longer be supported after March 31, 2011. If your code uses these elements or values, the Endicia Label Server Web Service will continue to accept them until March 31, 2011.
2010-04-07 Ver 4.9.3741	 Version 4.9 CalculatePostageRates, CalculatePostageRatesXML Added new Web methods to calculate "all" domestic or international postage rates.
2010-02-09 Ver 4.8.3691	 Version 4.8 Added support for the updated USPS international and customs forms 2976-A. EelPfc (LabelRequest XML) New: To specify the EEL/PFC value for the customs forms 2976-A.
2009-12-24 Ver 4.7.3642	 Version 4.7 Added support for USPS rates effective January 4, 2010. MailpieceShape (LabelRequest XML, PostageRateRequest XML) Added new value: FlatRatePaddedEnvelope SortType (LabelRequest XML, PostageRateRequest XML) Added new value: Nonpresorted. EntryFacility (LabelRequest XML, PostageRateRequest XML) Updated description. MailpieceDimensions (LabelRequest XML, PostageRateRequest XML) Updated description. POZipCode (LabelRequest XML) Updated description. InsuredMail (LabelRequest XML, PostageRateRequest XML) Increased the maximum insurable amount for Endicia Parcel Insurance to \$10,000. Country and Locality Listing Added Nosovo. Added new error codes: 501 NoCubicPostageCalculator 502 CubicPricingNotOffered 503 MailpieceCubicVolumeMustBePositive 504 MailpieceCubicVolumeExceedsMaximum 2020 AccountNotQualifiedForMailClass 2021 AccountNotQualifiedForFeature

Date	Change
2009-11-17 Ver 4.5.3603	 Version 4.5 MailClass (LabelRequest XML, PostageRateRequest XML) Added new value: StandardMail SortType (LabelRequest XML, PostageRateRequest XML) Added new values: BMC, MixedBMC, SCF. EntryFacility (LabelRequest XML, PostageRateRequest XML) Updated description. FromPostalCode (PostageRateRequest XML) Updated description. POZipCode (LabelRequest XML) Updated description. SundayHolidayDelivery (LabelRequest XML, PostageRateRequest XML) New: To request Express Mail Sunday/Holiday Delivery Service. ServiceLevel (LabelRequest XML, PostageRateRequest XML) Deleted value: SundayHolidayDelivery Backward compatibility note: When ServiceLevel contains a value of SundayHolidayDelivery, the SundayHolidayDelivery element will be set to true.
2009-09-17 Ver 4.4.3544	 Version 4.4 International Mail labels (LabelRequest XML) The tracking number for all international mail labels will be generated by Endicia. FromName, FromCompany, ToName, ToCompany Updated description. SCAN Form API The SCAN Form API now supports international labels with Endicia-generated tracking numbers.
2009-07-17 Ver 4.3.3485	 Version 4.3 Added support for USPS NSA rates for qualified accounts. FromPhone (LabelRequest XML) Updated: Made required for international mail. MailpieceShape (LabelRequest XML, PostageRateRequest XML) Added new value: MediumFlatRateBox Deleted value: FlatRateBox As of May 2009, USPS has renamed the regular Priority Mail Flat Rate box to Medium Flat Rate box. Backward compatibility note: When MailpieceShape contains FlatRateBox, it will be changed to MediumFlatRateBox. ToPhone (LabelRequest XML)

Date	Change
	11002 PICNumberServiceError 11003 InvalidPICNumberReceived 11202 PlanetCodeNumberServiceError 11203 InvalidPlanetCodeNumberReceived 11451 FailedRetrievingAccountInformation 11452 AccountInformationServiceError 11453 InvalidValueInAccountInformation 11503 UnknownDialAZipReturnCode
2009-05-03 Ver 4.2.3404	 Version 4.2 Added support for USPS domestic and international rates effective May 11, 2009. LabelSize (LabelRequest XML) To comply with USPS requirements, added a FIM to the indicia in EnvelopeSize10 and Postcard. Services, ElectronicReturnReceipt (LabelRequest XML) BpodClientDUNSNumber (LabelRequest XML) Updated description. Stealth (LabelRequest XML). Stealth cannot be used with LabelSize of EnvelopeSize10 and Postcard. EmailOptions (LabelRequest XML) Obsolete.
2009-03-20 Ver 4.1.3363	 Version 4.1 Express Mail labels (LabelRequest XML) The tracking number for all domestic Express Mail labels will be generated by Endicia. Express Mail shipments (SCAN Form Web Service API) SCAN form now accepts domestic Express Mail tracking numbers. TrackingNumber (LabelRequestResponse XML) Updated description.
2009-02-28 Ver 4.1.3344	 Version 4.1 CODAmount (LabelRequest XML, PostageRateRequest XML) New: To specify COD amount. EmailOptions (LabelRequest XML) Obsolete: Beginning March 15th, 2009, Endicia Label Server will no longer support e-mail notifications for Express Mail shipments. EntryFacility (LabelRequest XML, PostageRateRequest XML) New: To specify the entry facility. FromPostalCode (PostageRateRequest XML) Updated description. InsuredValue (LabelRequest XML, PostageRateRequest XML)

Date	Change
	Updated description. MailClass (LabelRequest XML, PostageRateRequest XML) Added new value: ParcelSelect POZipCode (LabelRequest XML) Updated description. Services (LabelRequest XML, PostageRateRequest XML) Added new attributes: COD, RestrictedDelivery SortType (LabelRequest XML, PostageRateRequest XML) Added new values: FiveDigit, Presorted BarcodeFormat, FlatRate, NoHolidayDelivery, Oversize, PackageSize, ReturnToSender, TrackingType (LabelRequest XML): Obsolete. FlatRate, PackageSize (PostageRateRequest XML): Obsolete. MailClass (LabelRequest XML, PostageRateRequest XML) Obsolete values: INTLAIRPARCEL, INTLGEM, INTLGPM Added new error codes: 409 InvalidMailpieceValue 436 InvalidEntryFacility 437 EntryFacilityDoesNotServiceDesination 11301 FailedRetrievingLabelNumber 11302 LabelNumberServiceError
2009-01-11 Ver 4.0.3296	 Version 4.0 Added support for USPS domestic and international rates effective January 18, 2009. GetPostageLabel, GetPostageLabelXML Added support for USPS Commercial Plus pricing. These Web methods will use the Commercial Plus rate to calculate the postage based on the qualification of the account. Note: Accounts that qualify for Commercial Plus Pricing have been identified by the USPS and require no change in the label request. All other accounts will use Commercial Base Pricing by default for domestic Express Mail and Priority Mail service. CalculatePostageRate, CalculatePostageRateXML Added support for USPS Commercial Plus pricing. A new Pricing element has been added to the PostageRateRequest XML that can be used to request different levels of pricing. IncludePostage (LabelRequest XML) Allow IncludePostage value of FALSE for all mail classes. This capability allows you to print labels without postage. MailpieceShape (LabelRequest XML, PostageRateRequest XML)

Date	Change
	 Added new value: SmallFlatRateBox Pricing (PostageRateRequest XML) New: To select pricing level. PostagePrice (LabelRequestResponse XML, PostageRateResponse XML) Updated: Pricing element within the Postage node to reflect new USPS pricing. CostCenter (GetTransactionsListing XML) A new element within the TrackingList node of the GetTransactionsListing API called <costcenter> that can have a value of "All" or any numeric value to pull transactions with the specific CostCenter value. This is an optional value and the Cost Center will not be included in the response unless it has been added to the request. </costcenter>
2008-10-30 Ver 3.55.3223	 Version 3.55 MailClass (LabelRequest XML, PostageRateRequest XML) Added new value: FirstClassMailInternational IncludePostage (LabelRequest XML) Allow IncludePostage value of FALSE for international mail classes. InsuredMail (LabelRequest XML, PostageRateRequest XML) For international mail classes, the Label Server will return an error if Endicia Insurance is not available for the destination country. Added new error codes: 422 OnlinePostageNotAllowed 448 InsuranceNotAvailableToCountry E-refunds are not currently supported for FCMI through Label Server. We will provide support for physical refunds in the next update to the Endicia Label Server.
2008-09-12 Ver 3.54.3177	 Version 3.54 MailClass (LabelRequest XML, PostageRateRequest XML) As of September 11, the USPS will require all Bound Printed Matter mailings to be paid by permit only. Therefore, BoundPrintedMatter will no longer be supported. Stealth (LabelRequest XML) Allow Stealth value of FALSE for international mail classes.
2008-07-22 Ver 3.53.3124	 Version 3.53 NonDeliveryOption (LabelRequest XML) New: To specify nondelivery instructions. ReturnToSender (LabelRequest XML) Obsolete.
2008-07-06 Ver 3.52.3103	 Version 3.52 EmailOptions (LabelRequest XML) New: To choose e-mail notification option. ImageFormat, CustomsFormImageFormat (LabelRequest XML)

Date	Change
	Added new value: PDF
2008-06-06 Ver 3.51.3077	 Version 3.51 Postage (PostageRateResponse XML) Updated description. PostagePrice (LabelRequestResponse XML, PostageRateResponse XML) New: To return the postage price. ResponseOptions (LabelRequest XML, PostageRateRequest XML) New: To choose XML elements returned in the response.
2008-05-03	 Version 3.5 Added support for USPS domestic and international rates effective May 12, 2008.
2008-04-30 Ver 3.4.3041	 Version 3.4 BarcodeFormat (LabelRequest XML) Obsolete: The Endicia Label Server will choose the proper barcode format based on the label type. InsuredMail (LabelRequest XML, PostageRateRequest XML) Added new value: UspsOnline ReplyPostage (LabelRequest XML) Updated: Enabled support for additional label types. Services (LabelRequest XML, PostageRateRequest XML) Added new attribute: ReturnReceipt. Added new error codes: 449 ExtraServiceNotAvailable

Date	Change
2008-03-20	➤ Version 3.3
Ver 3.3.3001	 NoHolidayDelivery (LabelRequest XML) Obsolete.
	NoWeekendDelivery (LabelRequest XML)
	Updated: Endorsement will show as No Delivery Saturday.
	ServiceLevel (LabelRequest XML, PostageRateRequest XML)
	New: To set service level for Express Mail.
	ShipDate, ShipTime (LabelRequest XML, PostageRateRequest XML)
	New: To specify ship date and time for Express Mail Sunday/Holiday Delivery.
	Added new error codes:
	2014 AccountPendingClose
	2015 AccountIsClosed
	11110 FailedRetrievingEMCommitments
	11111 NotEligibleForSundayHolidayDelivery
	11112 ServiceCommitmentsNotFound
	11113 ServiceCommitmentNotOnSundayHoliday
	11114 CannotMeetServiceCommitmentCutOffTime
	11115 NoSundayHolidayDeliveryToDestination
2008-03-01	> Version 3.2
Ver 3.2.2982	Added support for the new USPS Priority Mail Large Flat Rate Box.
Ver 3.2.2902	 MailpieceShape (LabelRequest XML, PostageRateRequest XML)
	Added new value: LargeFlatRateBox
2008-02-25	SCANRequest, CarrierPickupRequest, CarrierPickupCancel,
	CarrierPickupChange, MultiLocationCarrierPickup,
	TransactionListingRequest, RefundRequest, StatusRequest
	Added PassPhrase node.
	 SCANRequest
	Added PDF as ImageFormat.
	Get Transactions Listing API
	Corrected method name in documentation.
2008-02-08	As required by USPS regulations, the postage indicium in the label image returned
Vor 3 4 2060	in the LabelRequestResponse XML will contain the weight and zone information
Ver 3.1.2960	for all mailpieces which are classified as packages.
	 ImageResolution (LabelRequest XML)
	Enabled support for 203 dpi for all image formats.

2008-01-08 Ver 3.1.2929	 InsuredMail (LabelRequest XML, PostageRateRequest XML) Enabled Endicia insurance for International mail. InsuredValue (LabelRequest XML, PostageRateRequest XML) New: To specify insured value. Backward compatibility note: When insurance is requested and InsuredValue is not supplied, it will be copied from the Value element. LabelSize (LabelRequest XML) Added new value: Mailer7x5 (for LabelType of DestinationConfirm) Value (LabelRequest XML, PostageRateRequest XML) Updated description.
2008-01-02	UserSignup Changed length of CheckingAccountNumber and CheckingAccountRoutingNumber Nodes
2008-01-02	 SCANRequest, CarrierPickupRequest, CarrierPickupCancel, CarrierPickupChange, MultiLocationCarrierPickup, TransactionListingRequest, RefundRequest, StatusRequest Updated length of WebPassword node.
2007-12-13	 UserSignup Updated documentation to include remaining error messages Updated documentation to include notes about formatting of nodes. SCANRequest, CarrierPickupRequest, CarrierPickupCancel, CarrierPickupChange, MultiLocationCarrierPickup Added API
2007-11-09 Ver 3.1.2869	 MailpieceShape (LabelRequest XML, PostageRateRequest XML) USPS does not allow Delivery or Signature Confirmation service for First-Class Mail letter-size and flat-size mailpieces or Package Services flat-size mailpieces. To enforce this rule, the Endicia Label Server will now return one of the following error codes for an ineligible MailpieceShape and Confirmation Service combination: DeliveryConfirmationNotAvailable SignatureConfirmationNotAvailable
2007-10-18 Ver 3.1.2847	 BarcodeFormat (LabelRequest XML) Updated description. ImageRotation (LabelRequest XML) Enabled support for all rotation values. MailClass (LabelRequest XML, PostageRateRequest XML) Added new value: BoundPrintedMatter

2007-09-21	 RefundRequest Fixed documentation to show that the ErrMsg is returned regardless. Fixed documentation to show that it returns YES and NO, instead of True and False. TransactionsListingsRequest Added From Address info to documentation.
2007-08-23	LabelSize (LabelRequest XML)
Ver 3.1.2791	Added new value: 6x4 (for LabelType of Default)
2007-08-02	> Version 3.1
Ver 3.1.2770	 Added support for label output in ZPL II Programming Language:
Ver 5.1.2770	 ImageFormat (LabelRequest XML).
	Added new value: ZPLII
	LabelSize (LabelRequest XML)
	Added new value for use with CertifiedMail label type: 8X3
	Results (TransactionListingRequest)
	Added Results tag.
	StartDate, StartTime, EndDate, and EndTime (TransactionListingRequest)
	Made these tags optional.
	TransactionListingRequest
	Re-ordered output to be soonest transaction to oldest.
	Fixed title for status code definitions.
	UserSignup
	Added error messages.
	UserSignup, RefundRequest, StatusRequest, GetTransactionsListing
	Added <test></test> node to API Documentation.
2007-05-10	ImageFormat (LabelRequest XML).
Ver 3.0.2686	Enabled EPL2 for creating Priority Mail International, Flat Rate Envelope labels.

2007-05-03

Version 3.0

Ver 3.0.2679

Added support for the new 2007 USPS domestic and international rates.

CustomsCertify, CustomsSigner (LabelRequest XML)

New: To allow for electronic signing of international customs form..

- FlatRate¹ (LabelRequest XML, PostageRateRequest XML)
 Obsolete.
- Label (LabelRequestResponse XML)

New: To return the label as separate images.

LabelType (LabelRequest XML)

Added new value: International

MailClass (LabelRequest XML, PostageRateRequest XML)

Added new values:

ExpressMailInternational ³ PriorityMailInternational ³

Deleted values:

Postcard (replaced by First).

IntIGEM²

IntIGPM²

IntlAirParcel²

MailpieceDimensions⁴ (LabelRequest XML, PostageRateRequest XML)

New: To set the dimensions of the mailpiece.

MailpieceShape⁵ (LabelRequest XML, PostageRateRequest XML)

Added new values:

Card (replaces Postcard)

FlatRateBox

FlatRateEnvelope

IrregularParcel

LargeParcel

OversizedParcel

Deleted value: Postcard (replaced by Card).

Oversize¹ (LabelRequest XML)

Obsolete.

- PackageSize¹ (LabelRequest XML, PostageRateRequest XML)
 Obsolete.
- WeightOz (LabelRequest XML, PostageRateRequest XML)

Updated: Value allows for fractional ounces.

Backward compatibility notes:

1. FlatRate, Oversize and PackageSize are obsolete and will no longer be supported after July 15, 2007. They have been superseded by MailpieceShape. If your code uses these elements, the Endicia Label Server Web Service will continue to map them to the

	appropriate MailpieceShape value.
	2. IntlGEM, IntlGPM and IntlAirParcel will no longer be available starting May 14, 2007. If your code uses these mail classes, the Endicia Label Server Web Service will replace them with the new international mail classes: IntlGEM will be replaced with ExpressMailInternational; IntlGPM and IntlAirParcel will be replaced by PriorityMailInternational.
	3. The label images for the new International mail classes have a different format. For example, Express Mail International has four parts compared to five in Global Express Mail. Priority Mail International Flat Rate Envelope has only one part compared to three for Global Priority Mail Flat Rate Envelope.
	4. MailPieceDimensions is a new element that needs to be supplied for Priority Mail mailpieces going to Zones 5 – 8 and over 1 cubic foot to calculate the postage rate based on dimensional weight. Priority Mail Flat Rate Envelope and Priority Mail Flat Rate Box are not subject to this requirement.
	5. MailpieceShape, if not supplied, will default to Parcel with the following exceptions: For First-Class DestinationConfirm and CertifiedMail labels, mailpiece shape will default to Letter if WeightOz is 3.5 oz or less; otherwise, it will default to Flat. For Priority Mail CertifiedMail labels, mailpiece shape will default to Flat.
2007-02-28 Ver 2.3.2615	 LabelType (LabelRequest XML) Destination Confirm labels require approval from USPS and Endicia. PhoneNumberExtension (UserSignupRequest XML) Updated: Fixed spelling, incorrectly spelled node still works. StatusCode (StatusRequestResponse XML) New: Added new node to the response. Updated: Fixed typographical errors in response definition. GetTransactionsListing (Endicia Label Server Web Service) Added new API to get all transactions matching the input.
2007-02-27 Ver 2.3.2614	 RubberStamp1, RubberStamp2, RubberStamp3 (LabelRequest XML) Updated: Added Rubber Stamps to additional labels. ToZIP4 (LabelRequest XML) Updated: Value is optional.
2007-02-21 Ver 2.3.2608	 AutomationRate (LabelRequest XML, PostageRateRequest XML) New: To use automation rates. LabelSize (LabelRequest XML) Added new value for use with DestinationConfirm label type: Dymo30384 MailpieceShape (LabelRequest XML, PostageRateRequest XML)

	 New: To select shape of the mailpiece. ReplyPostage (LabelRequest XML) New: To print labels with reply postage. ShowReturnAddress (LabelRequest XML) New: To allow labels to print without the sender's address. SortType (LabelRequest XML, PostageRateRequest XML) New: To select sort level. ValidateAddress (LabelRequest XML) New: To bypass Dial-A-ZIP address validation. 	
2007-02-09 Ver 2.3.2596	 ImageRotation (LabelRequest XML) New: To allow rotation of label image. LabelSize (LabelRequest XML) Added new value for use with Default label type: DocTab 	
2007-01-30 Ver 2.3.2586	CalculatePostageRate, CalculatePostageRateXML (Endicia Label Server Web Service) Added new Web methods to calculate postage rate. ImageFormat (LabelRequest XML). Removed support for BMP format. LabelSize (LabelRequest XML) Added new values for use with DestinationConfirm label type: EnvelopeSize10 Postcard MailClass (LabelRequest XML) Added new value: Postcard RubberStamp1, RubberStamp2, RubberStamp3 (LabelRequest XML) New: To allow printing of user-supplied values. Stealth (LabelRequest XML) Updated: Defaults to TRUE. Sender's address is being validated; city, state and ZIP Code line is standardized.	
2006-11-12 Ver 2.2.2507	GetAccountStatus, GetAccountStatusXML (Endicia Label Server Web Service) Added new Web methods to get the status of an account.	
2006-11-03 Ver 2.2.2498	FromCity, ToCity (LabelRequest XML) City name can contain periods.	
2006-10-29 Ver 2.2.2493	 POZipCode (LabelRequest XML) New: To specify mailing location. FromName (LabelRequest XML) Value is optional. FromCompany (LabelRequest XML) 	

	Value is required for Express Mail if FromName is omitted. ToName (LabelRequest XML) Value is optional. ToCompany (LabelRequest XML) Value is required for Express Mail if ToName is omitted. RecreditAmount (RecreditRequest XML) Added new predefined amounts: 7500, 10000, 20000.	
2006-10-11 Ver 2.2.2482	ToPhone (LabelRequest XML) Updated description.	
2006-10-11 Ver 2.2.2475	 RecreditAmount (RecreditRequest XML) Field allows any amount of postage up to \$99,999.99. Changed the Service Icon Text from "1" to "FCM" for First-Class Mail labels. 	
2006-09-20 Ver 2.2.2454	 Version 2.2 Added support for customs forms: New in LabelRequest XML: CustomsFormType CustomsFormImageFormat CustomsFormImageResolution New in LabelRequestResponse XML: CustomsForm LabelType (LabelRequest XML) 	
2006-08-27 Ver 2.1.2430	 Added support for Delivery Confirmation to APO/FPO addresses as well as selected Pacific Island ZIP Codes. Enabled Certified Mail and Electronic Return Receipt for Default label type. 	
2006-08-08 Ver 2.1.2411	LabelSize (LabelRequest XML) Added new value: 6x4 (for LabelType of DestinationConfirm)	
2006-07-24 Ver 2.1.2396	 LabelType (LabelRequest XML) Added new value: DestinationConfirm LabelSize (LabelRequest XML) 	

	Added new value for use with DestinationConfirm label type: 7X3	
2006-07-19 Ver 2.1.2391	 ContentsType (LabelRequest XML) Added new value: ReturnedGoods ContentsExplanation (LabelRequest XML) New: To describe contents when ContentsType is set to OTHER. BpodClientDunsNumber (LabelRequest XML) New: To set DUNS number of partner. 	
2006-06-30 Ver 2.1.2372	FromCity, ToCity (LabelRequest XML) City name can contain hyphens.	
2006-06-28 Ver 2.1.2370 2006-05-23	LabelType (LabelRequest XML) Added new value: CertifiedMail MiddleInitial (UserSignup XML)	
2006-05-17 Ver 2.1.2328	Changed Middle Initial to not required. Services (LabelRequest XML) Added new attribute: ElectronicReturnReceipt.	
2006-05-16 Ver 2.1.2327	 BarcodeFormat (LabelRequest XML) Updated description. ImageResolution (LabelRequest XML) New: To allow selection of image resolution. Services (LabelRequest XML) Added new attribute: CertifiedMail. TrackingType (LabelRequest XML) Obsolete. 	
2006-04-06	 PassPhrase (LabelRequest XML, RecreditRequest XML, ChangePassPhraseRequest XML) Reduced size to 64 from 150. NewPassPhrase (ChangePassPhraseRequest XML) Reduced size to 64 from 150. 	
2006-03-22	 Version 2.1 Added support for label output in EPL2 Programming Language: ImageFormat (LabelRequest XML). Added new value: EPL2 	
2006-02-07	 Version 2.0 Added support for International Mail: 	

	 Updated in LabelRequest XML: MailClass ToPostalCode ToCountry New in LabelRequest XML: ReturnToSender OriginCountry ContentsType CustomsDescription1, CustomsQuantity1, CustomsWeight1, CustomsValue1, CustomsCountry1 CustomsDescription2, CustomsQuantity2, CustomsWeight2, CustomsValue2, CustomsCountry2 CustomsDescription3, CustomsQuantity3, CustomsWeight3, CustomsDescription4, CustomsQuantity4, CustomsWeight4, CustomsDescription4, CustomsQuantity4, CustomsWeight4, CustomsValue4, CustomsCountry4 CustomsDescription5, CustomsQuantity5, CustomsWeight5, CustomsValue5, CustomsCountry5 New in LabelRequestResponse XML: CustomsNumber Added support for PLANET Code labels (LabelRequest XML). 	
2006-01-11	 IncludePostage (LabelRequest XML) Added to allow PLANET Code labels to print without postage. 	
2005-12-12	 Version 1.2 Added support for current and new 2006 USPS domestic rates. 	
2005-08-15	 Bug fix (LabelRequest XML) Bug: Address verification would fail if the individual address elements of the Dial-A-ZIP XML were not URL encoded within the Endicia Label Server Web Service. Fix: URL encode the individual address elements of the Dial-A-ZIP XML. 	
2005-07-06	ToDeliveryPoint (LabelRequest XML) Updated: Element is optional.	
2005-07-05	LabelSize (LabelRequest XML) Added new value: 4X4.5	
2005-06-24	 LabelRequest XML The Endicia Label Server Web Service verifies and corrects, if necessary, the destination address. MailClass (LabelRequest XML) Added new value: LibraryMail RecreditAmount (RecreditRequest XML) 	

	Maximum amount of postage that can be added to the account has increased to \$5,000.	
 LabelSize (LabelRequest XML) New: To select size of the label. ToAddress1 (LabelRequest XML) Updated description. 		
2005-05-02	Maximum insurable value for Endicia insurance has increased to \$5,000.	
2005-04-04	 PackageSize (LabelRequest XML) New: To set size of package to regular, large or oversize. Oversize (LabelRequest XML) Updated description. 	
2005-03-30	 Added support for the Stealth feature. Endicia Label Server Web Service calculates rates for "Local" zones properly. Returned label image in the LabelRequestResponse XML reflects the changes to address lines in the LabelRequest XML. 	
2005-03-24	 ToName (LabelRequest XML) Value is now optional except for Express Mail. ToCompany (LabelRequest XML) Value is required if ToAddress1 through ToAddress4 are omitted. ToAddress1 (LabelRequest XML) Value is optional if ToCompany contains a value. ToAddress5, ToAddress6, ReturnAddress5, ReturnAddress6 Obsolete. Backward compatibility note: If your code uses these obsolete tags, adjust accordingly. ToName ToCompany ToAddress1, ToAddress2, ToAddress3, ToAddress4 FromName FromCompany ReturnAddress1, ReturnAddress2, ReturnAddress3, ReturnAddress4 Reduced size to 47 characters from 150 characters. Backward compatibility note: If your code uses the extra characters for the name, company or delivery address lines, adjust accordingly. 	
2005-02-09	Machinable (LabelRequest XML) New: To select machinable/non-machinable rate for Parcel Post. Oversize (LabelRequest XML) Updated to allow selection of oversize, non-machinable rate for Parcel Post.	

2005-01-25	 PIC (LabelRequestResponse XML) Changed size of field to 22. The UCC/EAN Code128 barcode requires prepending of application identifier of "91" to the PIC number. 	
2005-01-04	 BarcodeFormat (LabelRequest XML) New: To support the UCC/EAN Code128 barcode format. TrackingNumber (LabelRequest XML) Changed size of PIC value to 22. The UCC/EAN Code128 barcode requires prepending of application identifier of "91" to the PIC number. 	

Appendix B. Error Codes

Code	Error Code String	Error Message
101	GenericError	{Error Message}
102 I	InternalEndiciaError	Internal Endicia Error: {Error Message}
307 I	InvalidOriginZipCode	Invalid origin ZIP Code.
308 I	InvalidDestinationZipCode	Invalid destination ZIP Code.
404 I	MailClassNotSupported	Mail class not supported ({Mail Class}).
405 I	InvalidMailClass	Invalid mail class ({Mail Class}).
406 I	MailpieceWeightMustBePositive	Mailpiece weight must be greater than zero.
407 I	MailpieceWeightExceedsMaximum	Weight ({Weight} ounces) exceeds maximum allowed for Mail Service ({Weight} ounces).
409 I	InvalidMailpieceValue	{Description} value is invalid.
410 I	MailpieceValueMustBePositive	{Description} value must be greater than \$0.00.
411	MailpieceValueExceedsMaximum	Mailpiece value exceeds the {Amount} maximum allowed for {Insurance Type}.
412 I	MailpieceShapeNotSupported	Mailpiece shape not supported ({Mailpiece Shape}).
413 I	InvalidMailpieceShape	Invalid mailpiece shape ({Mailpiece Shape}).
414	ServiceLevelNotSupported	Service Level not supported ({Service Level}).
415 I	InvalidServiceLevel	Invalid Service Level ({Service Level}).
416	SortTypeNotSupported	Sort Type not supported ({Sort Type}).
417 I	InvalidSortType	Invalid Sort Type ({Sort Type}).
418 I	PricingNotOffered	{Pricing} pricing is not offered for {Mail Service}.
420 I	MailServiceNotAvailableToCountry	{Mail Service} is not available to {Country Name}.
421 I	InvalidCountry	{Country} is not a valid country.
422	OnlinePostageNotAllowed	Online postage is not allowed for {Mail Service} to {Country Name}.
423 I	LimitedMailServiceToCountry	{Mail Service} to {Country Name} is limited to {allowed mail service(s)}.
430 I	MailpieceDimensionsMustBePositive	Mailpiece length, width, and height must be greater than zero.
431 I	MailpieceDimensionsRequired	Mailpiece dimensions are required for {Mail Class}.
434	LengthPlusGirthExceedsMaximum	Mailpiece length plus girth of {Dimension}" exceeds maximum of {Dimension}" allowed by Mail Service.
436 I	InvalidEntryFacility	Invalid Entry Facility ({Entry Facility}).

Error Code	Error Code String	Error Message
437	EntryFacilityDoesNotServiceDesination	Entry Facility {Entry Facility} does not service destination ZIP code {ZIP code}.
440	DeliveryConfirmationNotAvailable	Delivery Confirmation is not available for {Description}.
441	SignatureConfirmationNotAvailable	Signature Confirmation is not available for {Description}.
448	InsuranceNotAvailableToCountry	{Insurance Type} is not available to {Country Name}.
449	ExtraServiceNotAvailable	{Extra Service} is not available for this mailpiece.
501	NoCubicPostageCalculator	Cubic postage calculator is not available for {Mail Class} {Pricing} pricing.
502	CubicPricingNotOffered	Cubic pricing is not offered for {Mail Class} {Pricing} pricing.
503	MailpieceCubicVolumeMustBePositive	Mailpiece cubic volume must be greater than zero.
504	MailpieceCubicVolumeExceedsMaximum	Cubic volume ({Volume} cu. ft.) exceeds maximum of {Volume} cu. ft. allowed for mail service.
1001	MissingOrInvalidXMLElement	Missing or invalid data element: {Element Name}
1002	ElementNotAllowed	Element not allowed: {Element Name}
1011	InvalidTrackingNumber	Service Type Code in Tracking Number must match Services requested for the package.
1020	InvalidRecreditAmount	RecreditAmount must be greater than zero and less than \$100,000.
1050	NoCustomsItems	Customs Info does not contain any customs items.
1051	InvalidCustomsItemData	{Element Name} must be a positive numeric value {Amount} or less.
1052	TotalCustomsValueMustBePositive	Total customs value must be a positive numeric value 99999.99 or less.
1053	ContentsWeightExceedsPackageWeight	Total package weight must be equal to or greater than the sum of the item weights.
1054	ExceedsItemLimitForCustomsForm	{Form Type} is limited to only {n} items.
1055	ExceedsValueLimitForCustomsForm	Total customs value cannot exceed {Amount} for mailpiece using Customs Form {Form Type}.
1501	ExceedsLimitForAddressLines	Address lines exceed maximum allowed.
1505	MailClassNotAllowedForLabel	{Mail Class} is not allowed for label.
1101	AccountNotAuthorizedForLabel	Account #{Account Number} is not authorized for the requested label type

Error Code	Error Code String	Error Message
2010	InvalidAccountStatus	Account #{Account Number} has an invalid status. Please contact the Endicia Label Server Support Team.
2011	AccountNeedsPassPhraseReset	Account #{Account Number} requires a Pass Phrase reset.
2012	AccountSuspendedBadLogins	Account #{Account Number} has been suspended due to multiple login attempts with an incorrect Pass Phrase. Please contact Endicia customer support at (650) 321-2640 x130 or LabelServer@endicia.com.
2013	AccountSuspendedForCause	Account #{Account Number} has been suspended. Please contact Endicia customer support at (650) 321-2640 x130 or LabelServer@endicia.com.
2014	AccountPendingClose	Account #{Account Number} is scheduled to be closed. Please contact Endicia customer support at (650) 321-2640 x130 or LabelServer@endicia.com.
2015	AccountIsClosed	Account #{Account Number} is closed. Please contact Endicia customer support at (650) 321-2640 x130 or LabelServer@endicia.com.
2020	AccountNotQualifiedForMailClass	Account #{Account Number} is not qualified for {Mail Class}.
2021	AccountNotQualifiedForFeature	Account #{Account Number} is not qualified for {Feature Description}.
3005	NameOrCompanyRequired	{Sender's Recipient's} name or company required.
3010	InsuredValueExceedsEndiciaMaximum	Insured value exceeds the \$10,000 maximum allowed by Endicia.
3011	InsuredValueMustBePositive	Insured value must be greater than \$0.00.
3020	FailedValidatingShipFromAddress	Unable to validate Ship From address.
3021	FailedValidatingShipToAddress	Unable to validate Ship To address.
3023	ExpressMailNotAvailableToDestination	Express Mail Service is not available to the destination address.
3024	ServiceNotAvailableToDestination	One or more services are not available to the destination address.
3025	CustomsFormNotAllowedForMailpiece	Customs Form is not allowed for mailpiece.
4001	InvalidFieldInDialAZipResponse	The {Field Name} field in Dial-A-ZIP response is invalid.
11001	FailedRetrievingPICNumber	Unable to retrieve PIC number: {Description}
11002	PICNumberServiceError	Error returned from PIC Number Service.
11003	InvalidPICNumberReceived	Invalid PIC number received: {Number}

Error Code	Error Code String	Error Message
11101	FailedRetrievingExpressMailNumber	Unable to retrieve Express Mail number: {Description}
11102	ExpressMailAPIError	Error returned from Express Mail API: {Description}
11110	FailedRetrievingEMCommitments	Unable to retrieve Express Mail Service Commitments: {Description}
11111	NotEligibleForSundayHolidayDelivery	Mailpiece not eligible for Express Mail Sunday/Holiday Delivery Service.
11112	ServiceCommitmentsNotFound	There were no Express Mail Service Commitments for the mailpiece.
11113	ServiceCommitmentNotOnSundayHoliday	Express Mail Sunday/Holiday Delivery Service not allowed: Service Commitment does not fall on a Sunday or a Holiday.
11114	CannotMeetServiceCommitmentCutOffTime	Ship time is past the latest cut-off time to meet Express Mail Service Commitment.
11115	NoSundayHolidayDeliveryToDestination	Express Mail Sunday/Holiday Delivery Service is not available to ZIP Code {Zip Code}.
11201	FailedRetrievingPlanetCode	Unable to retrieve PLANET Code.
11202	PlanetCodeNumberServiceError	Error returned from PLANET Code Number Service: {Description}
11203	InvalidPlanetCodeNumberReceived	Invalid PLANET Code number received.
11301	FailedRetrievingLabelNumber	Unable to retrieve {Mail Class/Extra Service} number: {Description}
11302	LabelNumberServiceError	Error returned from Label Number Service: {Description}
11303	NoLabelNumberReceived	Label Number Service did not return a label number.
11304	InvalidLabelNumberReceived	Invalid label number received from Label Number Service: {Label Number}
11401	FailedRetrievingBarcodeNumber	Unable to retrieve {Description} barcode number.
11402	InternationalLabelAPIError	Error returned from International Label API: {Description}
11403	CustomsFormsAPIError	Error returned from Customs Forms API: {Description}
11451	FailedRetrievingAccountInformation	Unable to retrieve information for account #{Account Number}: {Description}
11452	AccountInformationServiceError	Error returned from Account Information Service for account #{Account Number}: {Description}
11453	InvalidValueinAccountInformation	Invalid {Value Name} value received for account #{Account Number}.
11501	FailedValidatingAddress	Unable to validate address: {Description}

Error Code	Error Code String	Error Message
11502	NonDeliverableAddress	The address is not a deliverable location according to the US Postal Service.
11503	UnknownDialAZipReturnCode	Dial-A-ZIP Server ({Server Name}) has returned an unknown return code of {value}.
11611	DialAZipInvalidZipCode	Dial-A-ZIP error: Invalid ZIP Code
11612	DialAZipInvalidStateCode	Dial-A-ZIP error: Invalid state code.
11613	DialAZipInvalidCity	Dial-A-ZIP error: Invalid city.
11621	DialAZipAddressNotFound	Dial-A-ZIP error: Address not found.
11622	DialAZipMultipleMatchesTooAmbiguious	Dial-A-ZIP error: Address is too ambiguous.
11625	DialAZipStreetAddressNotMatch	City, State and ZIP Code are valid, but street address is not a match.
12001	PurchaseTooSmall	Buy transaction must be greater than \$10.00.
12002	IndiciumValueZero	Indicium value is zero.
12003	VpoTransactionFailed	VPO transaction failed ({Status Codes}): {Description}
12100	UnknownPostageTransactionError	The Postage Transaction has returned an unknown error.
12101	AccountNotFound	The Certified Intermediary's account number is invalid.
12103	InactiveAccount	The Certified Intermediary's account is not active.
12104	InsufficientFunds1	The Certified Intermediary's account does not have enough postage balance to support this transaction.
12115	IndiciumMaxExceeded	The indicium postage requested exceeds the account's limit
12116	InvalidCreditCard	Invalid credit card on account.
12117	InvalidCCExpiration	The account credit card's expiration date has passed
12118	InvalidPurchaseAmountLow	The purchase amount is too low.
12119	InvalidPurchaseAmountHigh	The purchase amount exceeds the account's purchase limit.
12120	CreditCardFailed	The credit card transaction failed.
12121	PurchaseUpdateFailed	The update to the account with the credit card information failed.
12124	DatabaseFailure	General database error
12125	InvalidRequest	The XML Request type is not recognized
12128	InvalidCCDeclined	The credit card purchase was declined by the customer's bank.

Error Code	Error Code String	Error Message
12129	InvalidCCReferred	The credit card purchase was "referred" by the customer's bank. Contact the bank.
12130	Unavailable	The Postage Server is unavailable.
12131	InvalidCCAddress	The address on the credit card is invalid.
12132	CCUnavailable	The credit card processing is unavailable.
12133	Locked	The account is locked (possibly in use).
12134	AccountHoldFailed	The request to hold the account for a transaction failed.
12135	InternetAccessFailure	Internet access/communication failure.
12136	AccountIsBusy	Account is busy.
12201	XmlParseError	The XML request cannot be parsed for all required elements. The description provides details on the problem item.
12500	KeyMacCheckFailed	The key on the account has been tampered with and no transactions are allowed.
12502	NegativeDollarIndiciumRequest	Indicium requests must be positive.
12503	InsufficientFunds2	There is not enough money in the account to produce the indicium.
12505	AccountMacFailed	The account information has been tampered with and no transactions are allowed.
12507	IncorrectPassPhrase	The Certified Intermediary's Pass Phrase is incorrect.
12514	ReplayDetected	The system has detected a duplicate request for postage.
12515	AccountMacCheckFailed	The account information has been tampered with and no transactions are allowed.
12525	AccountSuspended	The account has been suspended and no transactions are allowed.
13001	ConfirmReceiptFailed	Internal Error: Confirm Receipt transaction failed for label number {0}.
100002	InternalLabelServiceError	Internal Endicia Label Server Web Service Error: {Error Message}
100003	InvalidSoapRequestFormat	The format of the SOAP request is invalid.
100105	FailedCreatingPostageLabel	Failed to create postage label.
100106	FailedCreatingCustomsForm	Failed to create customs form.
100201	AccountNotQualifiedForPricing	Account #{Account Number} is not qualified for {Mail Class} {Pricing} pricing.

Appendix C. More Source Examples

This appendix contains various examples of source material to demonstrate how to perform certain actions, such as requesting a shipping label, including:

- Coldfusion Examples
- <u>C# Examples</u>
- Perl Examples
- PHP Examples
- Ruby Examples
- VisualBasic.NET Examples

Caution Statements

Note the following:

- No support or service of these samples is implied or acknowledged and use of it is completely at the user's discretion and responsibility.
- This section contains sample application programs in source language that illustrate programming techniques on various operating platforms. These examples have not been thoroughly tested under all conditions. Endicia, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs.
- The source code provided here are for sample use and are provided "as-is"; Endicia disclaims all express and implied warranties, including, the implied warranties of merchantability or fitness for a particular use. Endicia shall not be liable for any damages, including, direct, indirect, incidental, special or consequential damages for loss of profits, revenue, data or data use, incurred by you or any third party in connection with the use of these materials.
- This is a sample application and is provide "as is" and without warranty. The technical approach used in this sample implementation is one approach to achieve integration between the Endicia Label Server Web Service and a system. The techniques presented may not be appropriate for your system, for all scenarios, and within all development environments. Please make sure you consult the associated documentation of your development environment for further details.

Coldfusion Examples

This section shows one or more Coldfusion source examples:

• Request a First-Class Shipping Label: LabelServiceInvoke.cfm

Request a First-Class Shipping Label: LabelServiceInvoke.cfm

The following source example:

- Requests a First-Class shipping label, using the Request a Shipping Label API.
- Uses the ColdFusion development environment.

Important! Before proceeding, read and understand the <u>Caution Statements</u>.

Request a Shipping Rate: PHP5CalculatePostageRate.php

The following source example:

- Uses SOAP to request a shipping price using the Calculate Postage and Fees method of the Endicia Label Server API.
- Uses PHP5.

Important! Before proceeding, read and understand the <u>Caution Statements</u>.

```
<?php
$client = new
SoapClient("https://www.envmgr.com/LabelService/EwsLabelService.asmx?wsdl");
echo "<b>USING ARRAY</b><br />";
data = array
(
      'PostageRateRequest' => array
            'RequesterID' => 'Tester1',
            'CertifiedIntermediary' => array
                  'AccountID' => '123456',
                  'PassPhrase' => 'MyPassPhrase'
            'MailClass' => 'Priority',
            'WeightOz' => '54',
            'Value' => '100.00',
            'Services' => array
                  '@attributes' => array
                        'DeliveryConfirmation' => 'TRUE',
                        'SignatureConfirmation' => 'OFF'
            'FromPostalCode' => '94301',
            'ToPostalCode' => '56738'
      )
);
echo "Sending Array: <br />";
print r($data);
echo "<br />Result Returned:<br />";
$result = $client->CalculatePostageRate($data);
print r($result);
echo "<br /><br />Using the variables:<br />Status: " . $result-
>PostageRateResponse->Status . "<br />";
```

```
echo "Zone: " . $result->PostageRateResponse->Zone . "<br />";
echo "MailService: " . $result->PostageRateResponse->Postage->MailService .
"<br />";
echo "Rate: " . $result->PostageRateResponse->Postage->Rate . "<br />";
?>
```

Request a Refund: curlRefund.php

The following source example:

- Uses cURL to request a refund for a shipping label using the Refund Web Service API.
- Uses PHP4.

Important! Before proceeding, read and understand the **Caution Statements**.

```
<?
$xml = "";
$xml .= "<RefundRequest>\n";
$xml .= "<AccountID></AccountID>\n";
$xml .= "<WebPassword></WebPassword>\n";
$xml .= "<RefundList>\n";
$xml .= "<PICNumber>9101148008600086672136</PICNumber>\n";
$xml .= "</RefundList>\n";
$xml .= "</RefundRequest>\n";
$curl handle = curl init ();
curl setopt ($curl handle, CURLOPT URL,
'http://www.endicia.com/ELS/ELSServices.cfc?wsdl');
$postfields = array(
      'method' => 'RefundRequest',
      'XMLInput' => $xml
      );
curl setopt ($curl handle, CURLOPT FOLLOWLOCATION, 1);
curl setopt ($curl handle, CURLOPT RETURNTRANSFER, 1);
curl_setopt ($curl_handle, CURLOPT_SSL_VERIFYPEER, 0);
curl setopt ($curl handle, CURLOPT POST, 1);
curl setopt ($curl handle, CURLOPT POSTFIELDS, $postfields);
$curl result = curl exec ($curl handle) or die ("There has been a CURL EXEC
error");
cu
```

Request a Refund Based On PICNumber: formRefund.php

The following source example:

- Uses SOAP to request a refund based on PICNumber using the Refund Web Service API.
- Uses PHP4.

Important! Before proceeding, read and understand the **Caution Statements**.

```
<?php
require once ('nusoap.php');
$soapaddress = 'http://www.endicia.com/ELS/ELSServices.cfc?wsdl';

- 1. USPS either does not offer service to that country, e.g. Antarctica (AQ), or the destination is considered domestic, e.g. Guam (GU). This Country Code value should not be used for ToCountryCode; however, it can be used for CountryOfOrigin in CustomsInfo.
- 2. Country Codes of AC, Ascension Island, and TA, Tristan de Cunha, have been exceptionally reserved by the ISO 3166/MA. Both are dependencies of Saint Helena (SH).
- 3. USPS has reserved a private Country Code of XZ for Kosovo to reflect its independence from the Republic of Serbia. For ISO, the Country Code will remain RS. Use either XZ or RS for Kosovo.

Appendix E. Country and Locality Listing

Use the table below for specifying the country or locality in the ToCountry element, the OriginCountry element, and the five customs item elements named CustomsCountry1 through CustomsCountry5.

GLOSSARY

Account ID

A unique *Account ID* is assigned by Endicia when you sign up for the Endicia Label Server Web Service. The *Account ID* is associated with an Endicia postage account and holds information about postage transactions as well as available balance for printing postage.

When using the Test Server, you can use any 6 digit number for the Account ID. When on the production server, you will be supplied with an Endicia Label Server Account ID.

Girth

The distance around the thickest part of an object.

Pass Phrase

A very long and complex password. During the new account sign-up process, you will be asked to select a temporary *Pass Phrase* for the account. A Pass Phrase must be at least 5 characters long with a maximum of 64 characters. For added security, the Pass Phrase should be at least 10 characters long and include more than one word, use at least one uppercase and lowercase letter, one number and one non-text character, for example, punctuation.

Production Server

The *Production Server* contains the live version of the Endicia Label Server Web Service that generates shipping labels with real postage.

Requester ID

A *Requester ID* (also known as Partner ID or Partner Code) uniquely identifies the system making the request. Endicia assigns this ID during the new account sign-up process.

Test Server

The *Test Server* contains a test version of the Endicia Label Server Web Service that only generates "test" shipping labels with VOID postage. This allows you to develop and test your application's calls to the Endicia Label Server Web Service methods.

Web Password

You use the Web Password to:

- Gain access to the endicia.com Web site.
- View account transactions.
- Change account information.

The Web Password does not enable you to buy and print postage.

Web Service

A *Web Service* is a software system designed to support interoperable machine-to-machine interaction over a network. It has an interface described in a machine-processable format (specifically WSDL). Other systems interact with the Web Service in a manner prescribed by its description using SOAP-messages, typically conveyed using HTTP with an XML serialization in conjunction with other Web-related standards. Reference source: The W3C at http://www.w3.org/TR/ws-gloss/
